The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

INDICES DES PRIX DES MATIÈRES BRUTES (1986 = 100)

Les indices des prix des matières brutes (IPMB) mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1986, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 2009 de CANSIM.

Ces indices constituent la suite des Indices des prix des matières brutes, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990, et répétés dans le numéro de décembre de la présente publication.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes nettes payées et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1986 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

composite

price

indev

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entréessorties de 1986, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

dénote le mouvement de l'indice composite de prix

$$P_{t/0}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/0}^{i}$$

| . 70 | movement between the base period o and time t for the defined aggregate; | . 70 | entre la période de référence o et la période courante t pour l'agrégat spécifié; |
|------------------|--|------------------|--|
| wi | is the transaction value of the element i in 1986; | wi | est la valeur de transaction de l'élément i en 1986; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period o to time t; | P _{t/o} | est l'indice de prix de l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t; |
| \sum_{i} | indicates summation over all elements i in the defined aggregate. | Σ_{i} | indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié. |

(agg)

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Reference Document

(agg)

denotes the

Pt/o

See reference document in IPPI. Document contains the weighting pattern of the Raw Materials Price Indexes.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché pour une année récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

Document de référence

Voir le document de référence de l'IPPI, qui contient le schéma de pondération des indices de prix des matières brutes.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1986 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1986 as a time reference base and the weights used are 1986 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1986 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 2020. Indexes for the current year and the previous year are subject to revision.

These indexes are a continuation of the previously published Electricity Selling Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1986 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis. accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril. d'août et de décembre. Les indices ont comme période de référence 1986, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1986, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1986 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 2020. Les indices de la présente année et de l'année précédente sont sujets à révision.

Ces indices constituent la suite des indices des prix de vente de l'énergie électrique, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990 et répétés dans le numéro de décembre de la présente publication.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

V

THE 1994 CANADA YEAR BOOK

Your indispensable and comprehensive reference source on Canada

For essential information on Canada, turn to the *Canada Year Book*. An invaluable resource, the 1994 edition is beautifully designed in an inviting and easy-to-read format.

The 1994 Canada Year Book examines recent events, changes and trends in great detail. Organized carefully into 22 chapters, it answers questions on virtually every topic from geography through health to banking.

This edition features:

- Over 700 crisply written pages packed with eye-opening information on life in Canada from social, economic, cultural and demographic perspectives
- 250 concise tables plus 63 charts and graphs that put statistical information into focus
- Stunning photographs capturing distinctively Canadian scenes by some of this country's finest photographers
- Fascinating short feature articles covering everything from archaeology to white collar trends

Trusted for over 125 years by students, teachers, researchers, librarians and business people, the *Canada Year Book* is <u>the</u> reference source to consult <u>first</u> on all aspects of Canada.

An enduring addition to any home or office library!

ORDER YOUR COPY OF CANADA YEAR BOOK TODAY.

Available in separate English and French editions, the 1994 *Canada Year Book* (Catalogue No. 11-402E) is \$59.95 plus \$5.05 shipping and handling in Canada, US \$72 in the United States, and US \$84 in other countries.

To order, write to: Statistics Canada, Marketing Division, Sales and Service, Ottawa, Ontario K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

If more convenient, fax your order to 1-613-951-1584 or call toll-free 1-800-267-6677 and charge it to your VISA or MasterCard.

L'ANNUAIRE DU CANADA 1994

Un ouvrage complet et indispensable sur le Canada

Pour obtenir des renseignements essentiels sur le Canada, consultez l'Annuaire du Canada. Inestimable source d'information, l'édition de 1994 est un ouvrage d'une présentation très soignée, attrayant et facile à lire.

L'Annuaire du Canada 1994 étudie en profondeur les événements, les tendances et les changements récents. Divisé en 22 chapitres, il répond à vos questions sur presque tous les sujets, depuis la géographie jusqu'à la santé et la banque.

Voici ce que vous trouverez dans l'édition de 1994 :

- Plus de 700 pages écrites dans un style vif et pleines de renseignements intéressants sur les dimensions sociales, économiques, culturelles et démographiques de la vie canadienne
- 250 tableaux concis et 63 graphiques et diagrammes qui permettent de mettre en perspective l'information statistique
- Remarquables photographies de paysages typiquement canadiens par certains des photographes canadiens les plus illustres
- Courts articles fascinants sur des sujets divers, depuis l'archéologie jusqu'à l'évolution de la situation des cols blancs

Ouvrage de référence de prédilection des étudiants, des enseignants, des chercheurs, des bibliothécaires et des gens d'affaires, et ce depuis plus de 125 ans, l'*Annuaire du Canada* est celui qu'il faut consulter en premier pour en savoir plus long sur tous les aspects du Canada.

Un volume que vous voudrez conserver longtemps dans votre bibliothèque ou au bureau!

COMMANDEZ DÈS AUJOURD'HUI VOTRE EXEMPLAIRE DE L'ANNUAIRE DU CANADA

Vous pouvez vous procurer la version française ou anglaise de l'*Annuaire du Canada* 1994 (no 11-402F au catalogue) au coût de 59,95 \$ (supplément de 5,05 \$ pour les frais d'expédition et de manutention) au Canada, 72 \$ US aux États-Unis et 84 \$ US dans les autres pays.

Pour commander, écrivez à Statistique Canada, Division du marketing, Vente et service, Ottawa (Ontario) K1A 0T6, ou communiquez avec le centre de consultation de Statistique Canada le plus près (voir la liste qui figure dans la présente publication).

Si vous le préférez, télécopiez votre commande en signalant le 1-613-951-1584 ou téléphonez sans frais au 1-800-267-6677 et portez les frais à votre compte VISA ou MasterCard.

THE MARKET RESEARCH HANDBOOK 1993/1994

1991 CENSUS INCLUDED

The fastest way to get off to a good start!

Brainstorming with your colleagues produces some great marketing ideas. But which ones will you use? The Market Research Handbook can help you narrow vour options before you commit

any more time and resources to

developing your strategy.

This handbook is the most comprehensive statistical compendium on Canadian consumers and the businesses that serve them. It helps you to identify, define and locate your target markets.

Looking for . . .

... socio-economic and demographic profiles of 45 urban areas?

... revenue and expenditure data for retailers and small businesses?

The Market Research Handbook has it all... and more. It provides information on:

- 1991 Census information
- personal expenditures on goods and services
- size and composition of households and families
- wages, salaries and employment
- investment in Canadian industries
- labour force in various industries
- industry and consumer prices

It has been one of our bestsellers since 1977 for the simple reason that it offers such a range and depth of market data. Save time and money when you're looking for data or data sources, keep the Market Research Handbook close at hand for

easy reference

The Market Research Handbook (Cat. no. 63-224) is 894 (plus 7 % GST) in Canada, US\$113 in the United States and US\$132

To order, write to Statistics Canada, Marketing Division, Publication Sales, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Reference Centre listed in this publication

If more convenient, fax your order to (613) 951-1584. Or call toll-free 1-800-267-6677 and use your VISA or MasterCard

LE RECUEIL STATISTIQUE DES **ÉTUDES DE** MARCHÉ 1993/1994

RECENSEMENT DE 1991

Pour partir du bon pied!

Des séances de remue-méninges jaillissent d'excellentes idées de commercialisation. Mais lesquelles

choisir? Le Recueil

statistique des études de marché peut

> vous faciliter les choix avant que vous n'engagiez plus de temps et de ressources à l'élaboration de votre stratégie.

Ce recueil statistique est le plus exhaustif qui soit sur les consommateurs canadiens et les entreprises

qui les servent. Il vous aide à définir et situer vos marchés cibles.

Vous cherchez...

des profils socio-économiques et démographiques de 45 régions urbaines ?

des données sur les recettes et les dépenses de détaillants et de petites entreprises ?

Le Recueil contient tout cela... et plus encore :

- données sur le recensement de 1991
- dépenses personnelles en biens et en services
- taille et composition des ménages et des familles
- traitements, salaires et emploi
- investissements par secteur d'activité économique
- population active par secteur d'activité
- prix de l'industrie et de la consommation

Si c'est l'un de nos succès depuis 1977, c'est parce qu'il vous renseigne en long et en large sur le marché. Pour économiser temps et argent, vous ne sauriez vous en passer.

Le **Recueil statistique des études de marché** (n° 63-224 au catalogue) coûte 94 \$ (plus 7% de TPS) au Canada, 113 \$ US aux États-Unis et 132 \$ US dans les autres pays

Pour commander, veuillez écrire à Statistique Canada, Division du marketing. Vente des publications. Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus proche (voir-la liste figurant dans la présente publication)

Vous pouvez également commander par télécopieur au (613) 951-1584 ou composer sans frais le 1-800-267-6677 et utiliser votre carte VISA ou MasterCard.

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on CD, diskette, computer print-out, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct on line access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

NOTE TO USERS

With the release of the April, 1994 issue of Catalogue 62-011, Industry Price Indexes, Statistics Canada is publishing the Consulting Engineers Output Price Indexes (CEPI) for the first time.

These price indexes are published annually, from 1989 and are available in Tables 7 and 8.

For more information, contact Robin Lowe, Prices Division, 613-951-3370.

AVIS AUX UTILISATEURS

Statistique Canada, dans son édition d'avril 1994 de la publication Indices des prix de l'industrie (62-011) publiera pour la première fois les indices de prix des sorties des services d'ingénieurs-conseils (IPIC).

Ces indices de prix sont publiés annuellement, remontent à 1989 et sont disponibles dans les tableaux 7 et 8.

Pour plus de renseignements, communiquez avec Bernard Lupien, Division des prix 613-951-9605.

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

Registered Trade Mark of Statistics Canada.

Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisées et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division du marketing, Statistique Canada, Ottawa, K1A 0T6 ou téléphonez à (613) 951-8200.

NOTE TO USERS

With the release of the April, 1994 issue of Catalogue 62-011, Industry Price Indexes, Statistics Canada is publishing the Consulting Engineers Output Price Indexes (CEPI) for the first time.

These price indexes are published annually, from 1989 and are available in Tables 7 and 8.

For more information, contact Robin Lowe, Prices Division, 613-951-3370.

AVIS AUX UTILISATEURS

Statistique Canada, dans son édition d'avril 1994 de la publication Indices des prix de l'industrie (62-011) publiera pour la première fois les indices de prix des sorties des services d'ingénieurs-conseils (IPIC).

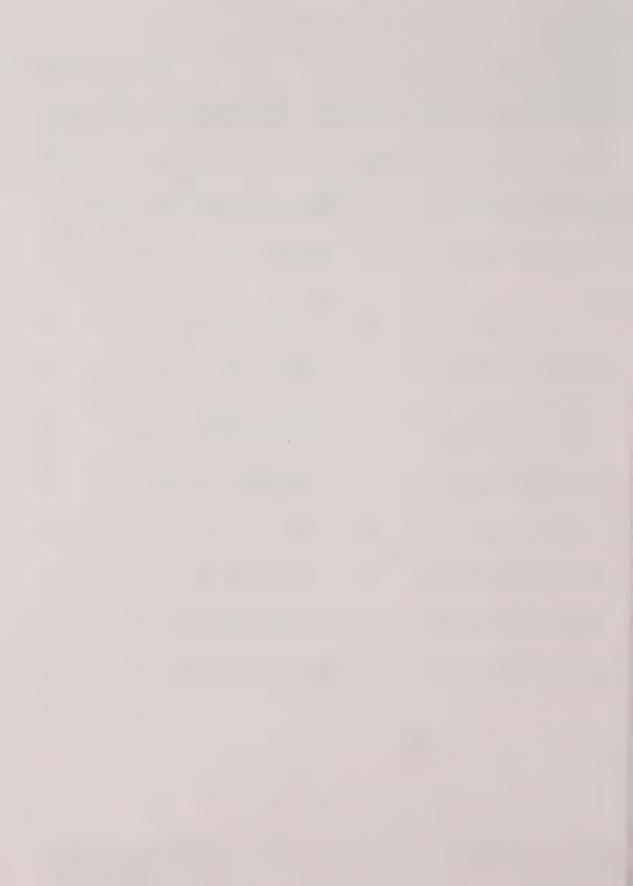

Ces indices de prix sont publiés annuellement, remontent à 1989 et sont disponibles dans les tableaux 7 et 8.

Pour plus de renseignements, communiquez avec Bernard Lupien, Division des prix 613-951-9605.

Highlights

Industrial Product Price Index

Preliminary data indicate that the year-over-year change in the Industrial Product Price Index (IPPI. 1986 = 100), which measures the change in manufacturer's prices rose to 4.0% in April from March's revised level of 3.7%. It has been rising since January 1994 and April's figure is the highest since January 1993 and the second highest since September 1988. The IPPI was 116.7 in April, up 0.2% from its March level.

In April, price increases continued to be widespread. but generally small, as the price indexes for 14 of the 21 major groups of products rose while 5 remained unchanged and 2 declined. The most significant price increases were for autos, trucks and other transport equipment (+1.0%) and paper and paper products (+2.1%). The 1.5% appreciation of the US dollar against the Canadian dollar was responsible for most of the former and contributed to the latter. The most important single price movement was the decline in the lumber, sawmill and other wood product prices, down 4.1%. The other index that declined was the beverages index which fell by 0.3%.

The increase in the year-over-year change in the IPPI was the result of increases for first-stage intermediate goods and second-stage intermediate goods. There were declines in the year-over-year change for capital equipment and for foods and feeds. The year-overyear change in other finished goods remained unchanged.

The price index for first-stage intermediate goods continued to increase in April, rising by 1.5%. The most important price increases in this category were those for pulp (+6.5%), industrial chemicals (+1.7%) and aluminum products (+2.2%).

The index for first-stage intermediate goods was 9.9% higher in April than a year before. This was the largest twelve month increase since March 1989. Although theyhave risen strongly for the last five months, prices for first-stage intermediate goods have only now regained the levels of three years ago.

In April, the price index for second-stage intermediate goods edged down by 0.2%. Nevertheless, the yearover-year change in second-stage intermediate goods rose to 3.2% compared to 2.9% in March.

Prices for finished goods rose again by 0.3% in April, the same as in March. The year-over-year change in the finished goods price index, edged down to 3.4% in April from 3.5% in March. The year-over-year

Faits saillants

Indice des prix des produits industriels

Selon les données provisoires, le taux de variation d'une année à l'autre de l'indice des prix des produits industriels (IPPI, 1986 = 100), qui mesure le changement de prix des manufacturiers, a progressé pour se fixer à 4,0% en avril comparativement au niveau révisé de 3.7% observé en mars. La variation a augmenté depuis janvier 1994: le niveau d'avril est le niveau le plus élevé enregistré depuis janvier 1993 et le deuxième niveau le plus élevé depuis septembre 1988. L'IPPI a atteint 116,7 en avril, un gain de 0,2% par rapport au niveau

En avril, les hausses de prix ont été largement réparties quoique généralement faibles. En effet, les indices de prix de 14 des 21 grands groupes de produits se sont accrus, tandis que cinq sont demeurés inchangés et deux ont chuté. Les gains les plus importants ont été observés au titre des voitures, camions et autre matériel de transport (+1,0%) et du papier et des produits connexes (+2,1%). La majoration (1,5%) de la valeur du dollar américain par rapport au dollar canadien explique en plus grande partie la hausse du premier groupe, et en partie, celle du second. Le plus important mouvement individuel observé a été la chute des prix des sciages, des produits de scierie et des produits divers (-4.1%). Par ailleurs, le seul autre indice à afficher un recul a été celui des boissons (-0,3%).

L'augmentation de la variation d'une année à l'autre de l'IPPI était attribuable à des hausses au titre des produits semi-finis de première étape et de deuxième étape. On a observé une diminution de la variation d'une année à l'autre de l'indice du matériel capitalisé et des aliments de consommation et des aliments pour animaux. La variation d'une année à l'autre quant aux autres produits finis est demeurée inchangée.

L'indice des prix des produits semi-finis de première étape a continué de progresser en avril, soit de 1,5%. Dans cette catégorie, ce sont les prix de la pâte de bois (+6,5%), des produits chimiques industriels (+1,7%) et des produits de l'aluminium (+2,2%) qui ont le plus augmenté.

En avril, l'indice des produits semi-finis de première étape a été de 9,9% supérieur à celui enregistré un an plus tôt. Il s'agit de la plus forte augmentation observée sur douze mois depuis mars 1989. Bien qu'ils se soient fortement accrus au cours des cinq derniers mois, les prix des produits semi-finis de première étape ne reviennent que maintenant aux niveaux observés il y a trois ans.

En avril, l'indice des prix des produits semi-finis de deuxième étape a légèrement diminué, soit de 0,2%. Néanmoins, la variation d'une année à l'autre de l'indice de ces produits s'est accrue à 3,2% par rapport à 2,9% en mars.

Les prix des produits finis ont progressé à nouveau en avril, cette fois de 0,3%, soit le même taux qu'en mars. La variation d'une année à l'autre de l'indice des prix des produits finis a chuté quelque peu pour passer de 3,5% en mars à 3,4% en change in both foods and feeds and capital equipment declined, from 1.9% to 1.5% and from 4.7% to 4.6% respectively. The year-over-year change in the index for all other finished goods remained unchanged at 3.7%. After the declines in the last half of 1993, and the increases in 1994, the annual rates of change are now about the same level as a year ago.

The automobiles, trucks, and other transport equipment price index rose by 1.0% in April. The 3.2% change in the automobile price index since January was primarily attributable to the decline in the value of the Canadian dollar.

In April, the paper and paper products index rose 1.0% as both pulp and newsprint prices increased. Domestic and export sulphate woodpulp prices rose by 6.1% and 8.0% respectively. Newsprint prices rose by 2.2%. The apparent firming of the markets for wood pulp at home and in the United States has allowed price increases for the first time since 1992. Those increases, however, proved not to be sustainable. Buoyed by the export market, newsprint prices continued to improve in April, despite a slight decline in the domestic market.

For the second month, there was a decline in prices for lumber and timber. Prices fell by 4.1% in April following a small decline of 0.3% in March. The most significant declines were for softwood lumber where declines in prices ranged from 17.6% on the prairies to 4.9% in the interior of British Columbia. Lumber prices in the coastal regions of British Columbia, however, rose by 1.7% (the result of price increases for western red cedar). The declines in lumber prices are the result of a healthy supply of lumber compared to the size of the current demand for it. Lumber mills continued producing throughout the winter, while bad weather cut back on construction.

avril. En ce qui concerne les aliments de consommation et les aliments pour animaux, et le matériel capitalisé, la variation annuelle des indices a fléchi, passant de 1,9% à 1,5% pour le premier groupe, et de 4,7% à 4,6% pour le second groupe. La variation d'une année à l'autre de l'indice de tous les autres produits finis est demeurée inchangée à 3,7%.

L'indice des prix des automobiles, des camions et d'autre matériel de transport s'est accru de 1,0% en avril. La baisse de la valeur du dollar canadien a continué d'expliquer la plus grande partie de la variation de l'indice des prix des automobiles qui a progressé de 3,2% depuis janvier.

En avril, l'indice des prix du papier et des produits connexes a augmenté de 1,0%, la pâte de bois et le papier journal ayant affiché des gains. Les prix domestiques de la pâte de bois au sulfate ont bondi de 6,1%, tandis que les prix à l'exportation de ce produit ont grimpé de 8,0%; les prix du papier journal ont progressé de 2,2%. En raison du raffermissement apparent des marchés canadien et américain de la pâte de bois, les prix ont augmenté pour la première fois depuis 1992. Toutefois, en 1992, il ne s'agissait pas de gains durables. Par ailleurs, soutenus par le marché de l'exportation, les prix du papier journal ont continué de progresser en avril malgré une légère baisse sur le marché domestique.

Pour un deuxième mois consécutif, on a observé un recul des prix des sciages et du bois d'oeuvre. Les prix ont régressé de 4.1% en avril après avoir diminué de 0,3% en mars. Le bois de construction (de résineux) a été touché par les baisses les plus marquées qui ont varié entre 17,6% dans les Prairies et 4,9% dans les régions intérieures de la Colombie-Britannique, bien que les prix du bois de construction dans les régions côtières de cette province aient grimpé de 1,7% (résultat de la hausse du prix du thuya géant). La chute des prix des sciages est attribuable à l'ampleur de l'offre de sciages par rapport à la demande actuelle pour ce produit. En effet, les scieries ont fonctionné tout l'hiver, mais le mauvais temps a eu pour effet de réduire le niveau des activités de construction.

Highlights

Raw Materials Price Index

Based on preliminary data, the Raw Materials Price Index (RMPI, 1986 = 100), which measures the change in the prices paid by manufacturer's for raw materials, rose 3.7% between March and April 1994. This increase was due to higher prices for crude oil (+15.5%) and to a much lesser extent, wood (+2.1%). All the other components showed small price increases except for the animals and animal products and non-ferrous metals components which declined slightly. The RMPI excluding the mineral fuels component increased 0.6% in April. On a year-to year basis the RMPI was up 3.5%. The RMPI excluding the mineral fuels component increased 8.5%.

In April 1994 the mineral fuels index was up 13.8% from March. This increase was due to an increase in crude oil prices (+15.5%), slightly offset by lower natural gas prices (-6.8%) as the heating season was coming to an end. However, crude oil prices were still almost 10% lower than a year ago.

Wood prices continued to increase in April (+2.1%). Logs and bolts, whose prices are now above their previous peak of last July have led the increase in wood prices. Logs and bolts prices have tended to lag those of processed lumber, which have turned down in the last two months.

The non-ferrous metals index decreased slightly in April (-0.5%) due to lower prices for copper concentrates (-3.7%). The downturn in copper concentrate prices occurred after several successive increases. Nevertheless, prices for copper and for most other base metals were considerably higher than last October.

Ferrous material prices edged up in April 0.6% due to higher prices for iron ore (+1.2%). Iron and steel scrap prices increased 0.1%, which was the lowest monthly increase in the last 8 months. Compared to a year ago ferrous material prices were up 20.4%. This increase was mainly due to higher prices for iron and steel scrap (+32.0%); however, most of the increases in scrap prices occurred in 1993.

Faits saillants

Indice des prix des matières brutes

D'après les chiffres préliminaires, l'indice des prix des matières brutes (IPMB, 1986 = 100), qui mesure le changement de prix payés par les manufacturiers pour les matières brutes, progresse de 3,7% entre mars et avril 1994. Cette progression s'explique par la montée des prix du pétrole brut (+15,5%) et, dans une moindre mesure, par la hausse des prix du bois (+2,1%). Toutes les autres composantes enregistrent de légères augmentations de prix, sauf la composante des animaux et substances animales et celle des métaux non ferreux, qui régressent légèrement. L'IPMB d'ensemble sans les combustibles minéraux s'élève de 0,6% en avril. D'une année à l'autre, l'IPMB s'accroît de 3,5%. L'IPMB sans les combustibles minéraux augmente de 8,5%.

En avril 1994, l'Indice des combustibles minéraux avance de 13,8% par rapport à mars. Cette hausse est attribuable à l'augmentation des prix du pétrole brut (+15,5%), qui est toutefois légèrement neutralisée par une baisse des prix du gaz naturel (-6,8%) en raison de la fin de la période froide. Il reste cependant que les prix du pétrole brut sont toujours près de 10% inférieurs aux prix d'il y a un an.

Les prix du bois continuent à progresser en avril (+2,1%). Les prix des billes et billots, qui sont supérieurs au sommet atteint en juillet dernier, ont un effet d'entraînement sur les prix du bois. Ils ont tendance à être en retard sur les prix des sciages, qui ont régressé au cours des deux derniers mois.

L'Indice des métaux non ferreux recule très légèrement en avril (-0,5%) en raison de la baisse des prix des concentrés de cuivre (-3,7%). Cette diminution des prix des concentrés de cuivre survient après plusieurs hausses consécutives. Les prix du cuivre et de la plupart des autres métaux de base sont malgré tout considérablement plus élevés qu'en octobre dernier.

Les prix des matières ferreuses avancent de 0,6% en avril par suite de l'augmentation des prix du minerai de fer (+1,2%). Les prix des déchets de fer et d'acier s'accroissent de 0,1%, ce qui constitue la plus faible augmentation mensuelle des huit derniers mois. Les prix des matières ferreuses progressent de 20,4% par rapport à l'an dernier. Cette progression est en grande partie attribuable à la hausse des prix des déchets de fer et d'acier (+32,0%); la plupart des augmentations des prix des déchets ont toutefois été enregistrées en 1993.

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes.

(1) Ce chiffre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres Indices demeuraient (1) (1) inchangés.

These indexes are preliminary.
Ces indices sont provisoires.

| | Minéraux non métalliques Mineral fuels - Combustibles minéraux | 95.7 | 84.1 | 13.8 | 15.3 | |

Note: Indexes for the most recent six months shown are subject to revision.
Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.
These indexes are preliminary.
Ces indices sont provisoires.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities index shall be regarded as authoritative, and the All Manufacturing industries is adjusted to match.
L'agrégation des indices par produits ou par industries devrait résulter en un même grand total. Corsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'Indice total – Tous les industries devrait résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'Indice total – Tous les industries manufacturières sera posé égal. (2)

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Las indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 14 to 43, 45 to 69) mn indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates either a spiit of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates special details. pppp indicates the PCG code (except for some special aggregations which include several PCGs). In the coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-556).

(1) En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique, une mesure du degré de couverture pour les indices particuliers. pppp indique le code du niveau M des produits, (up rend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les

rr inaque une composante d'un GPP.
La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonage sommaire et P indique une estimation indirecte. Pour les indices composites, la donnée en pourcentage représente une estimation du degré de couverture par échantillonnage direct (E+S). Ces mesures du degré de couverture par échantillonnage direct (E+S). Ces mesures du degré de couverture sont parfois arrondies au 5% le plus prés afin d'assurer la confidentialité. mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices les plus stables sont cotés A, les moins stables, D. Pour plus de renseignements, commandez le document de référence: indices des prix des produits industriels 1981 = 100, concepts et méthodes (nº 62-556 au catalogue).

TABLEAU 3. Indices des prix des produits industriels, par industries et groupes d'industries(1)

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

1) L'agrégation des indices par produits ou par industries devraient résulter au même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera

(2)

l'arrondissement, l'indice total - tous les produits devra être considere comme celui qui fait autorité, et indice total - toutes les industries individents acrosségal.

The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité. (2)

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industrial Product Price Indexes, 1986 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1986 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about four weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES INDICES DES PRIX INDUSTRIELS

Indices des prix des produits industriels, 1986 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1986. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (nº 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication nº 62-011 au catalogue, *Indices des prix de l'industrie*, paraît quatre semaines environ après le communiqué dans le Quotidien. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1986. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1986 Input/Output table which, in turn, is derived from 1986 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where wⁱ are the values of the output of each commodity:

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1986. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1986, laquelle à son tour est établie à partir des valeurs de 1986 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle wⁱ sont les valeurs de la production de chaque produit:

$$P_{t/0}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/0}^{i}$$

| (agg) P _{t/o} | denotes the composite price index movement between the base period o and time t for the defined aggregate; | (agg) P _{t/o} | dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini; |
|---------------------------|--|---------------------------|--|
| wi | is the transaction value of the element i in the base period; | wi | est la valeur de transaction de l'élément i au cours de la période de référence; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period to time t; | P _{t/o} | est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t; |
| Σ_{i} | indicates summation over all elements i in | \sum_{i} | signifie la sommation de tous les éléments i dans |

l'agrégat défini.

the defined aggregate.

Historical Data

Historical series on the 1986 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1986-based Industrial Product Price Indexes (IPPI) series and the corresponding 1981-based Industrial Product Price Indexes (IPPI) series, using the year 1986 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both set of IPPI series are available to the public.

Reference Documents

62-558 Industry Price Indexes, 1986 = 100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

Données historiques

Les séries historiques sur la base 1986 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1986 et des séries correspondantes des indices des prix des produits industriels (IPPI) basées sur 1986 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les deux ensembles de séries IPPI sont disponibles au public.

Documents de référence

62-558 Indices des prix de l'industrie, 1986 = 100: Guide aux utilisateurs, 40,00 \$.

Cette publication précise sommairement le contenu économique des séries dans un cadre général, de même qu'une brève description des différentes structures d'agrégation. Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats de produits. Y figurent également une description des caractéristiques des indices élémentaires. La publication contient des commentaires sur l'utilisation des indices.

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, 25,00 \$.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

RAW MATERIALS PRICE INDEXES (1986 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1986 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2009.

These indexes are a continuation of the previously published Raw Materials Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

INDICES DES PRIX DES MATIÈRES BRUTES (1986 = 100)

Les indices des prix des matières brutes (IPMB) mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1986, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 2009 de CANSIM.

Ces indices constituent la suite des Indices des prix des matières brutes, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990, et répétés dans le numéro de décembre de la présente publication.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes nettes payées et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1986 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes quyernementaux.

Les pondérations furent dérivées des tableaux d'entréessorties de 1986, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/0}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/0}^{i}$$

| (agg) P _{t/o} | denotes the composite price index movement between the base period o and time t for the defined aggregate; | (agg) P _{t/o} | dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié; |
|---------------------------|--|---------------------------|---|
| wi | is the transaction value of the element i in 1986; | wi | est la valeur de transaction de l'élément i en 1986; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period o to time t; | P _{t/o} | est l'indice de prix de l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t; |
| $\Sigma_{_{\mathrm{i}}}$ | indicates summation over all elements i in the defined aggregate. | Σ_{i} | indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié. |

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Reference Document

See reference document in IPPI. Document contains the weighting pattern of the Raw Materials Price Indexes.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché pour une année récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

Document de référence

Voir le document de référence de l'IPPI, qui contient le schéma de pondération des indices de prix des matières brutes.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1986 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The weights used are 1986 as a time reference base and the weights used are 1986 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1986=100, technical notes presented above. The indexes are available on CANSIM in matrix 2020. Indexes for the current year and the previous year are subject to revision.

These indexes are a continuation of the previously published Electricity Selling Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613)951-9607 or 951-3350, facsimile (613)951-2848.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1986 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis. accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril. d'août et de décembre. Les indices ont comme période de référence 1986, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1986, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1986 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 2020. Les indices de la présente année et de l'année précédente sont sujets à révision.

Ces indices constituent la suite des indices des prix de vente de l'énergie électrique, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990 et répétés dans le numéro de décembre de la présente publication.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone (613)951-9607 ou 951-3350, télécopieur (613)951-2848.

CONSULTING ENGINEERS' OUTPUT PRICE INDEXES (1992 = 100)

The consulting engineers' output price indexes (CEPI) measure the price changes of the services provided by consulting engineers. These services, which include advisory work, design work and supervision of its implementation, and project management, are provided for a variety of projects, and in different parts of the country. The data published in Tables 7 and 8 include indexes (column A in the tables) for 13 different fields of specialization, corresponding to those in the Survey of Consulting Engineers. For some fields of specialization indexes for different regions of the country are provided. An index for foreign projects is also given.

Indexes are published annually, approximately three months after the end of each calendar year. They are available at that time on CANSIM in matrices 2047, 2048 and 2049, or from Prices Division. Indexes for the latest year are subject to revision.

These indexes, dating from 1989, are the first to cover these activities. They are based on information from a sample of consulting engineering firms in Canada. The overall indexes are calculated by combining indexes for three separate measures: wage and salary rates, realized net multipliers (or fee-to-direct salary ratios), and output per unit of labour input (or labour productivity). Indexes are published for the changes in wage and salary rates, and in realized net multipliers, in columns B and C, respectively.

Respondents provide wage and salary movements, as they determine rates, usually annually. For each respondent this is the average of changes in the rate that would be paid to someone of certain abilities with a certain level of experience. It is not the change in average wages and salaries paid, because that would change with the mix of employees and experience. Respondents provide information on their realized net multipliers annually at the end of their financial year. Each respondent provides individual multipliers for each segment of activity for which the mark-up may differ. This may be as detailed as a specialization in one region, but the same multiplier may apply to more than one specialization or more than one region. In those cases the report is used as an observation in each of the areas covered. As the multipliers are realized figures, after the year is over, they reflect what was actually earned as a ratio of direct salaries, rather than what might have been intended. Productivity adjustments are calculated at a more aggregative level and applied evenly to all regions and specialities.

The finest market identified is for a field of specialization in a region. Six regions in Canada are identified: Atlantic provinces, Quebec, Ontario, Manitoba/Saskatchewan, Alberta, and British Columbia. Regional indexes are calculated for buildings,

INDICES DE PRIX DES SORTIES DES SERVICES D'INGÉNIEURS-CONSEILS (1992 = 100)

Les indices de prix des sorties des services d'ingénieurs-conseils (IPIC) mesurent les variations de prix des services fournis par les ingénieurs-conseils. Ces services, qui comprennent des services de consultation, des travaux de conception et la surveillance de leur mise en oeuvre et des services de gestion de projets, sont offerts pour une variété d'activités et dans différentes régions du pays. Les données publiées aux tableau 7 et 8 comprend les indices (colonne A dans les tableaux) de 13 différents domaines de spécialisation correspondant à ceux qui font l'objet de l'Enquête auprès des ingénieurs-conseils. Dans certains domaines de spécialisation, les indices sont établis pour différentes régions du pays. On trouve également un indice des projets réalisés à l'étranger.

Les indices sont publiés chaque année, environ trois mois après la fin de l'année civile. On peut alors les extraire de la base CANSIM dans les matrices 2047, 2048 et 2049 ou les obtenir auprès de la Division des prix. Les indices de la dernière année font l'objet d'une révision.

Ces indices, qui remontent à 1989, sont les premiers à couvrir de telles activités. Ils sont fondés sur des renseignements obtenus auprès d'un échantillon des entreprises d'ingénieurs-conseils du Canada. Les indices d'ensemble sont calculés en groupant les indices établis selon trois différentes mesures : les taux de salaires et de traitements, les multiplicateurs nets réels (ou les ratios des honoraires aux traitements directs) et la production par unité de main-d'oeuvre (ou productivité du travail). Les indices présentent, dans les colonnes B et C respectivement, les variations des salaires et des traitements, ainsi que des multiplicateurs nets réels.

Les répondants fournissent, chaque année habituellement, les données sur les mouvements des salaires et des traitements. car ces mouvements déterminent les taux. Pour chaque répondant, il s'agit de la variation moyenne du taux de rémunération qui serait versé à une personne possédant certaines compétences et une certaine expérience. Il ne s'agit pas de la variation des salaires et des traitements movens versés, car ces derniers varient en fonction de la composition et de l'expérience des employés. Chaque année, à la fin de leur exercice, les répondants fournissent les données sur leurs multiplicateurs nets réels. Chaque répondant fournit ses multiplicateurs propres pour chaque segment d'activité pour lequel la majoration peut varier. Les renseignements fournis peuvent être aussi détaillés qu'une spécialisation dans une région donnée; cependant, on peut appliquer le même multiplicateur à plus d'une spécialisation ou d'une région. Dans ces cas, le rapport sert de rapport d'observation pour chacune des régions étudiées. Comme les multiplicateurs sont réels, ils représentent, à la fin de l'année, la rémunération réelle en ratio des traitements directs plutôt que la rémunération prévue. Les ajustements de la productivité sont calculés à un niveau plus agrégatif et appliqués équitablement à toutes les régions et spécialisations.

L'indice le plus détaillé est celui du domaine de spécialisation dans une région donnée. Il existe six régions au Canada : les provinces de l'Atlantique, le Québec, l'Ontario, le Manitoba/Saskatchewan, l'Alberta et la Colombie-Britannique. Les indices des régions sont calculés pour les bâtiments, les

transportation, municipal services, and other environmental services. Canada indexes only are calculated for individual industrial specialities. However, the index for all industrial services differs from region to region because of the different mix of industrial projects.

The indexes at the finest level of detail are calculated as unweighted geometric averages of the returns from individual respondents. These indexes are aggregated to more general indexes using fixed weights. For combining regional indexes within a field of specialization the geographical distributions from the Survey of Capital Expenditures, 1989, 1990 and 1991 were used. For combining indexes for fields of specialization weights were taken from the Survey of Consulting Engineers for 1989 and 1991.

For further information: Please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6. For data only please contact the Information Unit in Prices Division at 613-951-3350, (fax: 613-951-2848), or any regional office, whose addresses and phone numbers are on the inside front cover of this book. For further information on concepts and methods, contact Robin Lowe (613-951-3370), or Bernard Lupien (613-951-9605).

transports, les services municipaux et d'autres services environnementaux. Les indices pour le Canada seulement sont calculés pour chaque spécialisation industrielle. Cependant, l'indice de l'ensemble des services aux entreprises diffère d'une région à l'autre en raison de la variété des projets des entreprises.

Les indices les plus détaillés sont calculés en tant que moyennes géométriques non pondérées des chiffres fournis par les répondants. Ces indices sont groupés sous forme d'indices plus généraux à pondération fixe. Pour grouper les indices régionaux d'un même domaine de spécialisation, on se fonde sur la répartition géographique de l'Enquête sur les dépenses d'immobilisations de 1989, de 1990 et de 1991. Pour grouper les indices des domaines de spécialisation, on se sert des poids appliqués dans le cadre de l'Enquête auprès des ingénieurs-conseils de 1989 et de 1991.

Pour plus de renseignements, communiquer avec la Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6. Pour obtenir des données seulement, communiquer avec la Soussection de l'information de la Division des prix au numéro 613-951-3350 (téléc. : 613-951-2848) ou avec les bureaux régionaux dont les coordonnées figurent au dos du plat supérieur de la présente publication. Pour plus de renseignements sur les concepts et les méthodes, communiquer avec Robin Lowe (613-951-3370) ou Bernard Lupien (613-951-9605).

UN PORTRAIT DU EANADA

POUR CÉLÉBRER LA GRANDEUR DE NOTRE PAYS

Canada challenges the imagination. Imagine a country where Newfoundlanders live closer to Africans than they do to fellow Canadians in British Columbia. Or a country with an island that has a glacier bigger than Ireland. Imagine a country with two million lakes, and the world's longest coastline – but that shares a border with only one nation.

Statistics Canada has created the 54th edition of Canada: A Portrait as a celebration of our great

nation. Drawn from Statistics Canada's rich palette of national data, it paints a picture of where we are socially, economically, culturally and politically.

Over 60 unique and beautiful photographs combined with lively text, provide a close-up look at the Canada of today.

Experience this land's remarkable natural regions and diverse human landscape through six chapters entitled: This Land,
The People, The Society,
Arts and Leisure,
The Economy, and
Canada in the World.

Eminent Canadians such as astronaut Roberta Bondar, former hockey star Jean Béliveau, and writer W.O. Mitchell have contributed their personal visions of Canada.

Canada: A Portrait is a beautiful illustration of the Canada of today.

Presented in a 30 cm X 23 cm (12 1/4" X 9") format, prestige hardcover, with over 200 pages, *Canada: A Portrait* (Catalogue No. 11-403E) is available in Canada for \$38.00 plus GST, US \$41.95 in the United States, and US \$48.95 in other countries.

To order write Statistics Canada, Publications Sales, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication. For faster ordering call toll-free 1-800-267-6677 and use your VISA and MasterCard or fax your order to (613) 951-1584.

Le Canada est un pays qui défie l'imagination. Imaginez un pays où les Terre-Neuviens vivent plus près des Africains que de leurs compatriotes de la Colombie-Britannique. Un pays où se trouve une île sur laquelle s'étend un glacier plus grand que l'Irlande. Imaginez un pays qui compte 2 millions de lacs et le plus long littoral du monde, et pourtant un seul voisin.

Statistique Canada a créé la 54^e édition d'**Un portrait du Canada** pour célébrer la grandeur de

notre pays. C'est à partir du riche éventail de données nationales de Statistique Canada que l'on a brossé ce tableau de notre situation sociale, économique, culturelle et politique.

Plus de 60 magnifiques photos, mariées à un texte vivant, offrent une vision claire et détaillée de ce qu'est le Canada d'aujourd'hui.

Découvrez les splendides régions naturelles de ce pays, de même que son paysage humain des plus diversifiés, à travers six chapitres intitulés :

Le territoire, La population, La société, Les arts et les loisirs, L'économie et Le Canada dans le monde.

D'éminents Canadiens, tels Roberta Bondar, astronaute, Jean Béliveau, ancienne vedette de hockey, et W.O. Mitchell, écrivain, y font part de leur vision personnelle du Canada.

Un portrait du Canada... un magnifique ouvrage de collection qui décrit admirablement bien le Canada d'aujourd'hui.

Présenté dans un format de 30 cm sur 23 cm (12,25 po X 9 po), dans une couverture rigide de luxe et en plus de 200 pages, *Un portrait du Canada* (N° 11-403F au catalogue) coûte 38 \$ plus TPS au Canada, 41,95 \$ US aux États-Unis et 48,95 \$ US dans les autres pays.

THE MARKET RESEARCH HANDBOOK 1993/1994

1991 CENSUS INCLUDED

The fastest way to get off to a good start!

Brainstorming with your colleagues produces some great marketing ideas. But which ones will you use? The Market Research Handbook

can help you narrow your options before you commit any more time and resources to developing your strategy.

This handbook is the most comprehensive statistical compendium on Canadian consumers and the businesses that serve them. It helps you to identify, define and locate your target markets.

Looking for...

- ...socio-economic and demographic profiles of 45 urban areas?
- ...revenue and expenditure data for retailers and small businesses?

The **Market Research Handbook** has it all... and more. It provides information on:

- 1991 Census information
- personal expenditures on goods and services
- size and composition of households and families
- wages, salaries and employment
- investment in Canadian industries
- labour force in various industries
- industry and consumer prices

It has been one of our bestsellers since 1977 for the simple reason that it offers such a range and depth of market data. Save time and money when you're looking for data or data sources, keep the **Market Research Handbook** close at hand for easy reference.

The **Market Research Handbook** (Cat. no. 63-224) is \$94 (plus 7 % GST) in Canada, US\$113 in the United States and US\$132 in other countries

To order, write to Statistics Canada, Marketing Division, Publication Sales, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Reference Centre listed in this publication.

If more convenient, fax your order to (613) 951-1584. Or call toll-free 1-800-267-6677 and use your VISA or MasterCard.

LE RECUEIL STATISTIQUE DES ÉTUDES DE MARCHÉ 1993/1994

RECENSEMENT DE 1991

Pour partir du bon pied!

Des séances de remue-méninges jaillissent d'excellentes idées de commercialisation. Mais lesquelles choisir ? Le **Recueil**

statistique des études de marché peut

vous faciliter les choix avant que vous n'engagiez plus de temps et de ressources à l'élaboration de votre stratégie.

Ce recueil statistique est le plus exhaustif qui soit sur les consommateurs canadiens et les entreprises

qui les servent. Il vous aide à définir et situer vos marchés cibles

Vous cherchez...

- ... des profils socio-économiques et démographiques de 45 régions urbaines ?
- ...des données sur les recettes et les dépenses de détaillants et de petites entreprises ?

Le Recueil contient tout cela... et plus encore :

- données sur le recensement de 1991
- dépenses personnelles en biens et en services
- taille et composition des ménages et des familles
- traitements, salaires et emploi
- investissements par secteur d'activité économique
- population active par secteur d'activité
- prix de l'industrie et de la consommation

Si c'est l'un de nos succès depuis 1977, c'est parce qu'il vous renseigne en long et en large sur le marché. Pour économiser temps et argent, vous ne sauriez vous en passer.

Le **Recueil statistique des études de marché** (n° 63-224 au catalogue) coûte 94 \$ (plus 7% de TPS) au Canada, 113 \$ US aux États-Unis et 132 \$ US dans les autres pays.

Pour commander, veuillez écrire à Statistique Canada, Division du marketing, Vente des publications, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus proche (voir la liste figurant dans la présente publication).

Vous pouvez également commander par télécopieur au (613) 951-1584 ou composer sans frais le 1-800-267-6677 et utiliser votre carte VISA ou MasterCard.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on CD, diskette, computer print-out, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct on-line access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and the listed documents should be directed to:

Goods and Services Producing Industries Section, Prices Division.

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9607) or to the Statistics Canada reference centre in:

| Halifax | (1-902-426-5331) | Regina | (1-306-780-5405) |

Standards of Service to the Public

To maintain quality service to the public, Statistics Canada follows established standards covering statistical products and services, delivery of statistical information, cost-recovered services and service to respondents. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM. la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou tous les documents énumérés doivent être adressées à:

Section des industries de biens et de services, Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9607) ou au centre de consultation de Statistique Canada à:

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

Registered Trade Mark of Statistics Canada.

Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisées et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissent pas dans cette publication sont disponibles de CANSIM.

NOTE TO USERS

With the release of the April, 1994 issue of Catalogue 62-011, Industry Price Indexes, Statistics Canada is publishing the Consulting Engineers Output Price Indexes (CEPI) for the first time.

These price indexes are published annually, from 1989 and are available in Tables 7 and 8.

For more information, contact Robin Lowe, Prices Division, 613-951-3370.

AVIS AUX UTILISATEURS

Statistique Canada, dans son édition d'avril 1994 de la publication Indices des prix de l'industrie (62-011) publiera pour la première fois les indices de prix des sorties des services d'ingénieurs-conseils (IPIC).

Ces indices de prix sont publiés annuellement, remontent à 1989 et sont disponibles dans les tableaux 7 et 8.

Pour plus de renseignements, communiquez avec Bernard Lupien, Division des prix 613-951-9605.

Highlights

Industrial Product Price Index

Preliminary data indicate that the year-over-year change in manufacturers' prices accelerated in May, jumping to 4.6% from 4.2% in April. This rate of change, which has been rising since January , reached its highest level since April 1988. In May, the inflationary pressure, however, came only from intermediate goods. The year-over-year change in final goods prices including goods used by consumers, declined to 3.0% from 3.5%.

The year-over-year change in producer prices in Canada is higher than in any of the other member countries of the G7, the next highest being Italy (which generally has an appreciably higher level of inflation). This is consistent with the Canadian economy being further along in the recovery process than certain other economies in the G7. However, the structure of the Canadian manufacturing sector differs from other G7 countries; the processing of raw materials and the export of these products plays a much larger role in Canada.

Price increases in May were widespread. Manufacturers saw prices rise in 13 major product groups. The most significant increases were for primary metal products, wood products and pulp. Price declines occurred in only two groups. The most significant was transport equipment.

Year-over-year change in producer prices

| Canada | 4.6% | May |
|---------|--------|----------|
| Italy | 4.0% | February |
| U.K. | 2.2% | April |
| Germany | 0.5% | April |
| USA | - 0.4% | April |
| France | - 1.5% | Q1 |
| Japan | - 2.7% | April |

The May increase in primary metal prices (+1.4%) was mainly due to a 10.9% rise in copper and copper alloy product prices. World copper stocks have been declining in the face of resurgent demand by the construction and telecommunications sectors.

Pulp prices were up 3.5% in May, with domestic prices increasing faster than export prices. For sulphate wood-pulp, domestic prices were up 6.1% compared with 1.7% for export prices. Domestically, the impact of increased demand has been reinforced by concern over a possible strike in the pulp industry in British Columbia.

Faits saillants

Indice des prix des produits industriels

Selon les données provisoires, le taux de variation d'une année à l'autre des prix des fabricants s'accélère en mai et passe de 4,2% en avril à 4,6% en mai. Ce taux de variation, qui est à la hausse depuis janvier, atteint son niveau le plus élevé depuis avril 1988. En mai, cependant, la pression inflationniste provient des biens intermédiaires. Le taux annuel de variation pour les produits finals, y compris les biens utilisés par les consommateurs, diminue, passant de 3,5% à 3,0%.

D'une année à l'autre, les prix à la production au Canada est supérieur à ceux de tout autre pays membre du G-7. Le pays qui vient ensuite est l'Italie, qui possède généralement un taux d'inflation sensiblement plus élevé. Cette évolution est conforme à l'état de l'économie canadienne, dont la reprise est plus forte que celle de certains autres pays du G-7. Toutefois, la structure du secteur canadien de la fabrication est différente de celle d'un grand nombre de ces pays, car la transformation des matières brutes et l'exportation de ces produits jouent un rôle beaucoup plus grand au Canada.

Les hausses de prix sont généralisées en mai, les prix augmentant dans 13 des principaux groupes. Les augmentations les plus appréciables touchent les produits de la première transformation des métaux, les produits du bois et la pâte de bois. Les prix ne baissent que dans deux groupes. La diminution la plus appréciable est celle du matériel de transport.

Taux de variation annuels des prix à la production

| Canada | 4,6% | Mai | |
|-------------|--------|---------|--|
| Italie | 4,0% | Février | |
| Royaume-Uni | 2,2% | Avril | |
| Allemagne | 0,5% | Avril | |
| États-Unis | - 0,4% | Avril | |
| France | - 1,5% | T1 | |
| Japon | - 2,7% | Avril | |

L'augmentation de 1,4% du prix des métaux de première transformation en mai s'explique principalement par la hausse de 10,9% du prix des produits du cuivre et d'alliages de cuivre. Les stocks mondiaux de cuivre sont à la baisse en raison de la remontée de la demande dans les secteurs de la construction et des télécommunications.

Le prix de la pâte de bois augmente de 3,5% en mai, la hausse des prix domestiques étant plus forte que celle des prix à l'exportation. Le prix intérieur de la pâte de bois blanchie au sulfate augmente de 6,1%, comparativement à 1,7% pour le prix à l'exportation. Au pays même, l'accroissement de la demande se trouve accentué par les inquiétudes entourant une grève possible dans le secteur de la pâte de bois en Colombie-Britannique.

After two months of declines, prices for lumber, sawmill, and other wood products recovered 1.3%. In May, price increases ranged from 4.0% in Ontario, to 12.7% in the Atlantic provinces. In British Columbia, however, prices edged down by less than 1.0%, a result of healthy stocks of western red cedar.

The 0.3% drop in transport equipment prices was primarily due to declines in both domestic and export automobile prices. Domestically, automobile prices dropped 1.3%. The 0.5% decline in the export prices of automobiles was primarily due to the 0.5% depreciation of the U.S. dollar against the Canadian dollar which reduced the value of U.S. dollars paid to Canadian producers.

Inflationary pressures came from a number of processed raw materials, and certain other intermediate goods, where much of the output is exported. Those inflationary pressures were moderated by declines in the year-over-year price changes for all three types of finished goods. The overall effect on the Canadian economy may well be an improved profit picture for exporting Canadian manufacturers with relatively little upward pressure on the Consumer Price Index.

Both first-stage and second-stage intermediate goods contributed to the inflationary pressure on the IPPI.

For first-stage intermediate goods, inflationary pressure came primarily from pulp (+3.5%) and copper and copper alloy products (+10.9%). Overall, the year-over-year change in first-stage intermediate goods jumped to 11.8% in May. This was its highest level since March 1989. Nevertheless, though prices for first-stage intermediate goods have been rising for the latest six months, they have only just regained the levels of three years earlier.

For second-stage intermediate goods, the year-overyear price change increased to 4.3% from 3.3%. Overall, prices for this category rose 0.3% from April to May, with lumber and timber (+1.5%) having the greatest impact.

The overall price level for finished goods in May remained virtually unchanged. The year-over-year change in finished goods prices dropped to 3.0% from 3.5%. Inflationary pressures eased in all three categories. The year-over-year change dropped for foods and feeds (+1.4% to +1.3%), capital equipment (+4.7% to +4.3%), and other finished goods (+3.8% to +3.3%). For both capital equipment and other finished goods, a decline in the prices of automobiles, trucks and buses had a major impact.

Après avoir baissé pendant deux mois, le prix des sciages, des produits de scierie et divers se redresse de 1,3%. Les hausses de prix sont comprises entre 4,0% en Ontario et 12,7% dans les provinces de l'Atlantique. Par contre, en Colombie-Britannique, les prix se replient de moins de 1,0% étant donnée que les stocks de thyua géant sont suffisants.

La chute de 0,3% du prix du matériel de transport résulte principalement de la baisse du prix des voitures au pays et à l'exportation. Au pays, la diminution de prix est de 1,3%. La baisse de 0,5% du prix à l'exportation des voitures est attribuable principalement à la dépréciation de 0,5% du dollar US par rapport à la monnaie canadienne, réduisant la valeur des montants en dollars US versés aux producteurs canadiens.

Les pressions inflationnistes découlent d'un certain nombre de matières brutes transformées et de quelques autres produits semi-finis, dont la plus grande partie de la production est exportée. Ces pressions inflationnistes sont atténuées par la diminution des variations de prix d'une année à l'autre pour les trois catégories de produits finis. L'effet global sur l'économie pourrait bien être une amélioration des bénéfices pour les fabricants exportateurs canadiens, avec une pression à la hausse relativement faible sur l'IPC.

Les produits semi-finis de première et de deuxième étape ont contribué aux pressions inflationnistes sur l'IPPI.

S'agissant des produits de première étape, les pressions inflationnistes proviennent principalement de la pâte de bois (+ 3,5%) et des produits du cuivre et d'alliages de cuivre (+ 10,9%). Au total, la variation d'une année à l'autree des prix des produits de première étape augmente pour atteindre 11,8% en mai. C'est son niveau le plus élevé depuis mars 1989. Quoi qu'il en soit, même si le prix des produits semifinis de première étape est à la hausse depuis six mois, il ne rejoint seulement que maintenant son niveau d'il y a trois ans.

La variation d'une année à l'autre de prix des produits semifinis de deuxième étape augmente pour passer de 3,3% à 4,3%. Au total, les prix de cette catégorie s'accroissent de 0,3% entre avril et mai, la hausse de 1,5% dans le cas des sciages et des rondins exerçant la pression la plus forte.

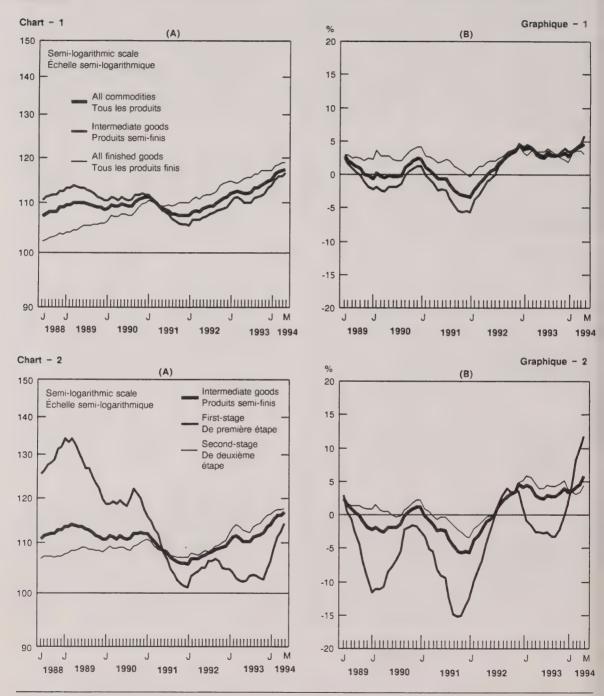

Le niveau général des prix des produits finis en mai reste essentiellement inchangé, tandis que la variation d'une année à l'autre des prix des produits finis diminue, de 3,5% à 3,0%. Les pressions inflationnistes se relâchent pour toutes les trois catégories. La variation d'une année à l'autre pour les aliments de consommation et les aliments pour animaux passe de 1,4% à 1,3%, pour le matériel capitalisé, de 4,7% à 4,3%, et enfin pour tous les autres produits finis, de 3,8% à 3,3%. Tant pour le matériel capitalisé que pour les autres produits finis, la baisse du prix des voitures, des camions et des autobus exerce l'influence la plus forte.

Highlights

Raw Materials Price Index

Based on preliminary data, raw material prices rose 3.3% between April and May 1994. This increase was mainly due to higher prices for crude oil (+10.9%). Non-ferrous metals, vegetable products, and wood also rose significantly. Lower prices for animals and animal products and ferrous materials had a marginal impact on the overall monthly raw materials price change. The steady rise in prices for crude oil, non-ferrous metals, wood and vegetable products were the major contributors to the Raw Materials index increasing by 10.1% in the last six months.

With increases in crude oil prices of more than 25% in the t last two months, prices were almost the same as in May 1993. OECD crude oil stocks were down more than 2% compared to the first quarter last year. This decline was partly due to the exceptionally cold weather in North America and the effort by OPEC to control production. Supplies were as tight in the second quarter with the continuing OPEC supply management and production problems in the North Sea and Columbia.

Non-ferrous metal prices have continued rising since November 1993. In the last six months prices for copper concentrates rose 44%, aluminum materials, 34%, nickel concentrates, 26%, and gold 7%. Strong U.S. demand appears to be the driving force behind higher copper prices. There is no evidence of similar demand for the other base metals; nevertheless, significant price increases have occurred.

Wood prices continued edging up in May. Compared to six months ago wood prices were 8% higher. Higher prices for softwood logs and bolts, up almost 10% in that period contributed greatly to the higher wood prices.

Vegetable product prices have been steadily increasing since the last half of 1993. Higher prices for wheat, canola, corn and soybeans were the commodities accounting for most of the price change in the group. Wheat prices were up almost 40% from a year ago, and canola prices nearly 50% for the same time period.

Animals and animal product prices fell in May (-1.7%), along with ferrous material prices (-3.4%). The decline in ferrous material prices was mainly due to lower prices for iron and steel scrap (-6.1%) its first decline in 16 months. Iron and steel scrap prices had previously increased by 54% from December 1992 to April 1994.

Faits saillants

Indice des prix des matières brutes

D'après les chiffres préliminaires les prix des matières brutes ont augmenté de 3,3% entre avril et mai 1994. Cette hausse est due principalement à la montée des prix du pétrole brut (+10,9%). Des hausses de prix importantes ont également été enregistrées pour les métaux non ferreux, les substances végétales et le bois. La diminution des prix des animaux et substances animales et des matières ferreuses n'a guère influé dans l'ensemble sur le mouvement mensuel des prix des matières brutes. La progression constante des prix du pétrole brut, des métaux non ferreux, du bois et des substances végétales a puissamment contribué à l'augmentation de 10,1% de l'indice des prix des matières brutes au cours des six derniers mois.

La progression de plus de 25% des prix du pétrole brut au cours des deux derniers mois a porté les prix à des niveaux très proches de ceux de mai 1993. Les stocks de pétrole brut des pays de l'OCDE étaient en baisse de plus de 2% par rapport au premier trimestre de l'année dernière. Cette diminution s'explique en partie par le temps exceptionnellement froid en Amérique du Nord et par les efforts de l'OPEP de contrôler la production. Les approvisionnements ont été limités tout autant au deuxième trimestre, toujours en raison du contrôle de l'offre par l'OPEP et aussi à cause des problèmes de production dans la Mer du Nord et en Colombie.

Les prix des métaux non ferreux ont progressé continuellement depuis novembre 1993. Au cours des six derniers mois, les prix des concentrés de cuivre ont augmenté de 44%, ceux de l'aluminium de 34%, ceux des concentrés de nickel de 26%, et ceux de l'or de 7%. Il semble que la forte demande américaine ait poussé les prix du cuivre à la hausse. Rien ne laisse croire en l'existence d'une demande analogue pour les autres métaux communs, qui ont pourtant inscrit des majorations importantes.

Les prix du bois ont continué d'augmenter lentement en mai. Par rapport à il y a six mois, les prix du bois ont avancé de 8%. L'augmentation des prix des billes et billots de résineux, en hausse de près de 10% au cours de la période, a grandement contribué à la montée des prix du bois.

Les prix des substances végétales sont en progression constante depuis la dernière moitié de 1993. Des prix plus élevés pour le blé, le canola, le maïs et le soja expliquent en grande partie le changement de prix pour ce groupe. Depuis un an, les prix du blé ont augmenté de près de 40% et les prix du canola de près de 50%.

Les prix des animaux et substances animales ont chuté en mai (-1,7%), de même que ceux des matières ferreuses (-3,4%). Le recul des prix des matières ferreuses est dû surtout à la diminution observée pour les déchets de fer et d'acier (-6,1%), la première en 16 mois. De décembre 1992 à avril 1994, les prix des déchets de fer et d'acier avaient augmenté de 54%.

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

These indexes are preliminary.

Ces indices sont provisoires.

The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

L'agregation des indices par produits ou par industries devrait résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison de l'arrondissement, l'Indice total – Tous les produits devra être considéré comme celui qui fait autorité, et l'Indice total – Toutes les industries manufacturieres sera posé égal. (2)

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

11) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates either a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates special details. pppp indicates the PCG code (except for some special aggregations which include several PCGs). rr indicates a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order industrial Product Price indexes are marked A, the least stable, D. For further information order industrial Product Price indexes are marked A, the least stable, D. For further information order industrial Product Price indexes are marked A, the least stable, D. For further information order industrial Product Price indexes are marked A, the least stable, D. For further information order industrial Product Price indicates are numbered to sampling.

The most stable indexes are marked A, the least stable, D. For further information order industrial Product Price indexes are marked A, the least stable, D. For least stable indexes

(Catalogue 62-556).
En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnn), un numero d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique prend la forme générale ss-mm-nn-pppp-rr où: ss indique le code du niveau S des produits (de 9 à 28) mm indique le code du niveau M des produits (de 14 à 43, 45 à 69) mm indique le code du niveau M des produits (de 14 à 43, 45 à 69) mm indique le code GPP (sauf pour certains agregats spéciaux qui comprennent plusieurs GPP) rr indique une composante d'un GPP.
La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonnage exhaustif, S indique une composante d'un GPP.
La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole: E indique un échantillonnage exhaustif, S indique un échantillonnage direct (E+S). Ces mesures du degré de couverture par échantillonnage direct (E+S). Ces mesures du degré de couverture sont partois arrondies au 5% le plus prés afin d'assurer la confidentialité. La mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'Indice en tant qu'estimation basée sur un échantillon. Les indices la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices la splus stabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices la splus stabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon se mant la traite de l'indice en tant qu'estimation basée sur un échantillon se direct (

Note: Indexes for the most recent six months shown are subject to revision.

Nota. Les indices figurant pour les six mois les plus récents sont sujets à révision.

The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities lndex shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera posé égal.

(2) The numeric code to the right of the CANSIM databank number on the last line of each series is the 1980 Standard Industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

(2) Le code numérique à la droite du numero Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industrial Product Price Indexes, 1986 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1986 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about four weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES INDICES DES PRIX INDUSTRIELS

Indices des prix des produits industriels, 1986 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1986. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indices des prix de l'industrie*, paraît quatre semaines environ après le communiqué dans le Quotidien. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabiliste, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1986. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1986 Input/Output table which, in turn, is derived from 1986 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in production patterns.

Formula

(agg)

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where wⁱ are the values of the output of each commodity:

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix, bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1986. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1986, laquelle à son tour est établie à partir des valeurs de 1986 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle wⁱ sont les valeurs de la production de chaque produit:

$$P_{t/0}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/0}^{i}$$

| P _{t/o} | denotes the composite price index movement between the base period o and time t for the defined aggregate; | |
|------------------|--|--|
| wi | is the transaction value of the element i in | |

$$\sum_{i}$$
 signifie la sommation de tous les éléments i dans l'agrégat défini.

Historical Data

Historical series on the 1986 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1986-based Industrial Product Price Indexes (IPPI) series and the corresponding 1981-based Industrial Product Price Indexes (IPPI) series, using the year 1986 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both set of IPPI series are available to the public.

Reference Documents

62-558 Industry Price Indexes, 1986 = 100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone 951-3350, facsimile (613)951-2848.

Données historiques

Les séries historiques sur la base 1986 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1986 et des séries correspondantes des indices des prix des produits industriels (IPPI) basées sur 1986 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les deux ensembles de séries IPPI sont disponibles au public.

Documents de référence

62-558 Indices des prix de l'industrie, 1986 = 100: Guide aux utilisateurs, 40,00 \$.

Cette publication précise sommairement le contenu économique des séries dans un cadre général, de même qu'une brève description des différentes structures d'agrégation. Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats de produits. Y figurent également une description des caractéristiques des indices élémentaires. La publication contient des commentaires sur l'utilisation des indices.

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, 25,00 \$.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices.

La publication contient également un glossaire.

RAW MATERIALS PRICE INDEXES (1986 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1986 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 2009.

These indexes are a continuation of the previously published Raw Materials Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

INDICES DES PRIX DES MATIÈRES BRUTES (1986 = 100)

Les indices des prix des matières brutes (IPMB) mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1986, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 2009 de CANSIM.

Ces indices constituent la suite des Indices des prix des matières brutes, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990, et répétés dans le numéro de décembre de la présente publication.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes nettes payées et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1986 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entréessorties de 1986, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| (agg) P _{t/o} | denotes the composite price index movement between the base period o and time t for the defined aggregate; | (agg) P _{t/o} | dénote le mouvement de l'indice composite de prix entre la période de référence o et la période courante t pour l'agrégat spécifié; |
|---------------------------|--|---------------------------|---|
| w ^j | is the transaction value of the element i in 1986; | wi | est la valeur de transaction de l'élément i en 1986; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period o to time t; | P _{t/o} | est l'indice de prix de l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t; |
| $\Sigma_{_{\mathrm{i}}}$ | indicates summation over all elements i in the defined aggregate. | \sum_{i} | indique la sommation sur tous les éléments i faisant partie de l'agrégat spécifié. |

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Reference Document

See reference document in IPPI. Document contains the weighting pattern of the Raw Materials Price Indexes.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone 951-3350, facsimile (613)951-2848.

À l'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché pour une année récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

Document de référence

Voir le document de référence de l'IPPI, qui contient le schéma de pondération des indices de prix des matières brutes.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone 951-3350, télécopieur (613)951-2848.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1986 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1986 as a time reference base and the weights used are 1986 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1986 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 2020. Indexes for the current year and the previous year are subject to revision.

These indexes are a continuation of the previously published Electricity Selling Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone 951-3350, facsimile (613)951-2848.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1986 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril. d'août et de décembre. Les indices ont comme période de référence 1986, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1986, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1986 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 2020. Les indices de la présente année et de l'année précédente sont sujets à révision.

Ces indices constituent la suite des indices des prix de vente de l'énergie électrique, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990 et répétés dans le numéro de décembre de la présente publication.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone 951-3350, télécopieur (613)951-2848.

CONSULTING ENGINEERS' OUTPUT PRICE INDEXES (1992 = 100)

The consulting engineers' output price indexes (CEPI) measure the price changes of the services provided by consulting engineers. These services, which include advisory work, design work and supervision of its implementation, and project management, are provided for a variety of projects, and in different parts of the country. The data published in Tables 7 and 8 include indexes (column A in the tables) for 13 different fields of specialization, corresponding to those in the Survey of Consulting Engineers. For some fields of specialization indexes for different regions of the country are provided. An index for foreign projects is also given.

Indexes are published annually, approximately three months after the end of each calendar year. They are available at that time on CANSIM in matrices 2047, 2048 and 2049, or from Prices Division. Indexes for the latest year are subject to revision.

These indexes, dating from 1989, are the first to cover these activities. They are based on information from a sample of consulting engineering firms in Canada. The overall indexes are calculated by combining indexes for three separate measures: wage and salary rates, realized net multipliers (or fee-to-direct salary ratios), and output per unit of labour input (or labour productivity). Indexes are published for the changes in wage and salary rates, and in realized net multipliers, in columns B and C, respectively.

Respondents provide wage and salary movements, as they determine rates, usually annually. For each respondent this is the average of changes in the rate that would be paid to someone of certain abilities with a certain level of experience. It is not the change in average wages and salaries paid, because that would change with the mix of employees and experience. Respondents provide information on their realized net multipliers annually at the end of their financial year. Each respondent provides individual multipliers for each segment of activity for which the mark-up may differ. This may be as detailed as a specialization in one region, but the same multiplier may apply to more than one specialization or more than one region. In those cases the report is used as an observation in each of the areas covered. As the multipliers are realized figures, after the year is over, they reflect what was actually earned as a ratio of direct salaries. rather than what might have been intended. Productivity adjustments are calculated at a more aggregative level and applied evenly to all regions and specialities.

INDICES DE PRIX DES SORTIES DES SERVICES D'INGÉNIEURS-CONSEILS (1992 = 100)

Les indices de prix des sorties des d'ingénieurs-conseils (IPIC) mesurent les variations de prix des services fournis par les ingénieurs-conseils. Ces services, qui comprennent des services de consultation, des travaux de conception et la surveillance de leur mise en oeuvre et des services de gestion de projets, sont offerts pour une variété d'activités et dans différentes régions du pays. Les données publiées aux tableaux 7 et 8 comprend les indices (colonne A dans les tableaux) de 13 différents domaines de spécialisation correspondant à ceux qui font l'objet de l'Enquête auprès des ingénieurs-conseils. Dans certains domaines de spécialisation, les indices sont établis pour différentes régions du pays. On trouve également un indice des projets réalisés à l'étranger.

Les indices sont publiés chaque année, environ trois mois après la fin de l'année civile. On peut alors les extraire de la base CANSIM dans les matrices 2047, 2048 et 2049 ou les obtenir auprès de la Division des prix. Les indices de la dernière année font l'objet d'une révision.

Ces indices, qui remontent à 1989, sont les premiers à couvrir de telles activités. Ils sont fondés sur des renseignements obtenus auprès d'un échantillon des entreprises d'ingénieurs-conseils du Canada. Les indices d'ensemble sont calculés en groupant les indices établis selon trois différentes mesures : les taux de salaires et de traitements, les multiplicateurs nets réels (ou les ratios des honoraires aux traitements directs) et la production par unité de main-d'oeuvre (ou productivité du travail). Les indices présentent, dans les colonnes B et C respectivement, les variations des salaires et des traitements, ainsi que des multiplicateurs nets réels.

Les répondants fournissent, chaque année habituellement, les données sur les mouvements des salaires et des traitements. car ces mouvements déterminent les taux. Pour chaque répondant, il s'agit de la variation moyenne du taux de rémunération qui serait versé à une personne possédant certaines compétences et une certaine expérience. Il ne s'agit pas de la variation des salaires et des traitements moyens versés, car ces derniers varient en fonction de la composition et de l'expérience des employés. Chaque année. à la fin de leur exercice, les répondants fournissent les données sur leurs multiplicateurs nets réels. Chaque répondant fournit ses multiplicateurs propres pour chaque segment d'activité pour lequel la majoration peut varier. Les renseignements fournis peuvent être aussi détaillés qu'une spécialisation dans une région donnée; cependant, on peut appliquer le même multiplicateur à plus d'une spécialisation ou d'une région. Dans ces cas, le rapport sert de rapport d'observation pour chacune des régions étudiées. Comme les multiplicateurs sont réels, ils représentent, à la fin de l'année, la rémunération réelle en ratio des traitements directs plutôt que la rémunération prévue. Les ajustements de la productivité sont calculés à un niveau plus agrégatif et appliqués équitablement à toutes les régions spécialisations.

The finest market identified is for a field of specialization in a region. Six regions in Canada are identified: Atlantic provinces, Quebec, Ontario, Manitoba/Saskatchewan, Alberta, and British Columbia. Regional indexes are calculated for buildings, transportation, municipal services, and other environmental services. Canada indexes only are calculated for individual industrial specialities. However, the index for all industrial services differs from region to region because of the different mix of industrial projects.

The indexes at the finest level of detail are calculated as unweighted geometric averages of the returns from individual respondents. These indexes are aggregated to more general indexes using fixed weights. For combining regional indexes within a field of specialization the geographical distributions from the Survey of Capital Expenditures, 1989, 1990 and 1991 were used. For combining indexes for fields of specialization weights were taken from the Survey of Consulting Engineers for 1989 and 1991.

For further information: Please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6. For data only please contact the Information Unit in Prices Division at 613-951-3350, (fax: 613-951-2848), or any regional office, whose addresses and phone numbers are on the inside front cover of this book. For further information on concepts and methods, contact Robin Lowe (613-951-3370), or Bernard Lupien (613-951-9605).

L'indice le plus détaillé est celui du domaine de spécialisation dans une région donnée. Il existe six régions au Canada : les provinces de l'Atlantique, le Québec, l'Ontario, le Manitoba/ Saskatchewan, l'Alberta et la Colombie-Britannique. Les indices des régions sont calculés pour les bâtiments, les transports, les services municipaux et d'autres services environnementaux. Les indices pour le Canada seulement sont calculés pour chaque spécialisation industrielle. Cependant, l'indice de l'ensemble des services aux entreprises diffère d'une région à l'autre en raison de la variété des projets des entreprises.

Les indices les plus détaillés sont calculés en tant que moyennes géométriques non pondérées des chiffres fournis par les répondants. Ces indices sont groupés sous forme d'indices plus généraux à pondération fixe. Pour grouper les indices régionaux d'un même domaine de spécialisation, on se fonde sur la répartition géographique de l'Enquête sur les dépenses d'immobilisations de 1989, de 1990 et de 1991. Pour grouper les indices des domaines de spécialisation, on se sert des poids appliqués dans le cadre de l'Enquête auprès des ingénieurs-conseils de 1989 et de 1991.

Pour plus de renseignements, communiquer avec la Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6. Pour obtenir des données seulement, communiquer avec la Sous-section de l'information de la Division des prix au numéro 613-951-3350 (téléc. : 613-951-2848) ou avec les bureaux régionaux dont les coordonnées figurent au dos du plat supérieur de la présente publication. Pour plus de renseignements sur les concepts et les méthodes, communiquer avec Robin Lowe (613-951-3370) ou Bernard Lupien (613-951-9605).

GRANDEUR DE NOTRE PAYS

Canada challenges the imagination. Imagine a country where Newfoundlanders live closer to Africans than they do to fellow Canadians in British Columbia. Or a country with an island that has a glacier bigger than Ireland. Imagine a country with two million lakes, and the world's longest coastline - but that shares a border with only one nation.

Statistics Canada has created the 54th edition of Canada: A Portrait as a celebration of our great

nation. Drawn from Statistics Canada's rich palette of national data, it paints a picture of where we are socially, economically, culturally and politically.

Over 60 unique and beautiful photographs combined with lively text, provide a close-up look at the Canada of today.

Experience this land's remarkable natural regions and diverse human landscape through six chapters entitled: This Land, The People, The Society, Arts and Leisure,

The Economy, and Canada in the World.

Eminent Canadians such as astronaut Roberta Bondar, former hockey star Jean Béliveau, and writer W.O. Mitchell have contributed their personal visions of Canada.

Canada: A Portrait is a beautiful illustration of the Canada of today.

Presented in a 30 cm X 23 cm (12 1/4" X 9") format, prestige hardcover, with over 200 pages, Canada: A Portrait (Catalogue No. 11-403E) is available in Canada for \$38.00 plus GST, US \$41.95 in the United States, and US \$48.95 in other countries.

To order write Statistics Canada, Publications Sales, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication. For faster ordering call tollfree 1-800-267-6677 and use your VISA and MasterCard or fax your order to (613) 951-1584.

Le Canada est un pays qui défie l'imagination. Imaginez un pays où les Terre-Neuviens vivent plus près des Africains que de leurs compatriotes de la Colombie-Britannique. Un pays où se trouve une île sur laquelle s'étend un glacier plus grand que l'Irlande. Imaginez un pays qui compte 2 millions de lacs et le plus long littoral du monde, et pourtant un seul voisin.

Statistique Canada a créé la 54^e édition d'**Un** portrait du Canada pour célébrer la grandeur de

notre pays. C'est à partir du riche éven-

tail de données nationales de Statistique Canada que l'on a brossé ce tableau de notre situation sociale. économique, culturelle et politique.

Plus de 60 magnifiques photos, mariées à un texte vivant, offrent une vision claire et détaillée de ce qu'est le Canada d'aujourd'hui.

Découvrez les splendides régions naturelles de ce pays, de même que son paysage humain des plus diversifiés, à travers six chapitres intitulés

Le territoire, La population, La société, Les arts et les loisirs. L'économie et Le Canada dans le monde.

D'éminents Canadiens, tels Roberta Bondar, astronaute, Jean Béliveau, ancienne vedette de hockey, et W.O. Mitchell, écrivain, y font part de leur vision personnelle du Canada.

Un portrait du Canada... un magnifique ouvrage de collection qui décrit admirablement bien le Canada d'aujourd'hui.

Présenté dans un format de 30 cm sur 23 cm (12,25 po X 9 po), dans une couverture rigide de luxe et en plus de 200 pages, Un portrait du Canada (Nº 11-403F au catalogue) coûte 38 \$ plus TPS au Canada, 41,95 \$ US aux Etats-Unis et 48,95 \$ US dans les autres pays.

Pour commander, écrivez à Statistique Canada, Vente des publications, Ottawa (Ontario), K1A 0T6 ou communiquez avec le Centre régional de consultation de Statistique Canada le plus proche. La liste figure dans la publication. Pour commander plus rapidement, composez sans frais le 1-800-267-6677 et utilisez votre carte VISA ou MasterCard ou télécopiez votre commande au (613) 951-1584.

MERCI DE VOTRE COMMANDE!

Statistique Canada Statistics Canada Canadä

THE 1994 CANADA YEAR BOOK

Your indispensable and comprehensive reference source on Canada

For essential information on Canada, turn to the Canada Year Book. An invaluable resource, the 1994 edition is beautifully designed in an inviting and easy-to-read format.

The 1994 Canada Year Book examines recent events, changes and trends in great detail. Organized carefully into 22 chapters, it answers questions on virtually every topic from geography through health to banking.

This edition features:

- Over 700 crisply written pages packed with eye-opening information on life in Canada from social, economic, cultural and demographic perspectives
- 250 concise tables plus 63 charts and graphs that put statistical information into focus
- Stunning photographs capturing distinctively Canadian scenes by some of this country's finest photographers
- Fascinating short feature articles covering everything from archaeology to white collar trends

Trusted for over 125 years by students, teachers, researchers, librarians and business people, the *Canada Year Book* is <u>the</u> reference source to consult <u>first</u> on all aspects of Canada.

An enduring addition to any home or office library!

ORDER YOUR COPY OF CANADA YEAR BOOK TODAY.

Available in separate English and French editions, the 1994 *Canada Year Book* (Catalogue No. 11-402E) is \$59.95 plus \$5.05 shipping and handling in Canada, US \$72 in the United States, and US \$84 in other countries.

To order, write to: Statistics Canada, Marketing Division, Sales and Service, Ottawa, Ontario K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

If more convenient, fax your order to 1-613-951-1584 or call toll-free 1-800-267-6677 and charge it to your VISA or MasterCard.

L'ANNUAIRE DU CANADA 1994

Un ouvrage complet et indispensable sur le Canada

Pour obtenir des renseignements essentiels sur le Canada, consultez l'Annuaire du Canada. Inestimable source d'information, l'édition de 1994 est un ouvrage d'une présentation très soignée, attrayant et facile à lire.

L'Annuaire du Canada 1994 étudie en profondeur les événements, les tendances et les changements récents. Divisé en 22 chapitres, il répond à vos questions sur presque tous les sujets, depuis la géographie jusqu'à la santé et la banque.

Voici ce que vous trouverez dans l'édition de 1994 :

- Plus de 700 pages écrites dans un style vif et pleines de renseignements intéressants sur les dimensions sociales, économiques, culturelles et démographiques de la vie canadienne
- 250 tableaux concis et 63 graphiques et diagrammes qui permettent de mettre en perspective l'information statistique
- Remarquables photographies de paysages typiquement canadiens par certains des photographes canadiens les plus illustres
- Courts articles fascinants sur des sujets divers, depuis l'archéologie jusqu'à l'évolution de la situation des cols blancs

Ouvrage de référence de prédilection des étudiants, des enseignants, des chercheurs, des bibliothécaires et des gens d'affaires, et ce depuis plus de 125 ans, l'*Annuaire du Canada* est celui qu'il faut consulter <u>en premier</u> pour en savoir plus long sur tous les aspects du Canada.

Un volume que vous voudrez conserver longtemps dans votre bibliothèque ou au bureau!

COMMANDEZ DÈS AUJOURD'HUI VOTRE EXEMPLAIRE DE L'ANNUAIRE DU CANADA

Vous pouvez vous procurer la version française ou anglaise de l'*Annuaire du Canada* 1994 (no 11-402F au catalogue) au coût de 59,95 \$ (supplément de 5,05 \$ pour les frais d'expédition et de manutention) au Canada, 72 \$ US aux États-Unis et 84 \$ US dans les autres pays.

Pour commander, écrivez à Statistique Canada, Division du marketing, Vente et service, Ottawa (Ontario) K1A 0T6, ou communiquez avec le centre de consultation de Statistique Canada le plus près (voir la liste qui figure dans la présente publication).

Si vous le préférez, télécopiez votre commande en signalant le 1-613-951-1584 ou téléphonez sans frais au 1-800-267-6677 et portez les frais à votre compte VISA ou MasterCard.

re you getting your information on the Canadian economy "first-hand"?

Chances are, you spend hours reading several newspapers and a handful of magazines trying to get the whole economic picture – only to spend even more time weeding out fiction from fact! Wouldn't it be a great deal more convenient (and much more effective) to go straight to the source?

Join the thousands of successful Canadian decision-makers who turn to Statistics Canada's *Canadian Economic Observer* for their monthly briefing.

Loaded with first-hand information, collectively published nowhere else, CEO is a quick, concise and panoramic overview of the Canadian economy. Its reliability and completeness are without equal.

A single source

Consultations with our many readers – financial analysts, planners, economists and business leaders – have contributed to CEO's present, widely acclaimed, two-part format. The **Analysis Section** includes thought-provoking commentary on current economic conditions, issues, trends and developments. The **Statistical Summary** contains the complete range of hard numbers on critical economic indicators: markets, prices, trade, demographics, unemployment and more.

More practical, straightforward and user-friendly than ever before, the *Canadian Economic Observer* gives you more than 150 pages of in-depth information in one indispensable source

My purchase CEO?

As a subscriber, you'll be <u>directly connected</u> to Statistics Canada's economic analysts. Names and phone numbers of the experts who can help solve your particular research problem or find specialized data are listed with articles and features.

You'll also receive a complimentary copy of CEO's annual **Historical Statistical Supplement**. Sixty years of historical perspectives right at your fingertips – at <u>no additional cost</u>.

So why wait for others to publish Statistics Canada's data second-hand when you can have it straight from the source? Order your subscription to the *Canadian Economic Observer* today

The Canadian Economic Observer (catalogue number 10-230) is \$220 annually in Canada, US\$260 in the United States and US\$310 in other countries

To order, write:

Statistics Canada Marketing Division Sales and Service Ottawa, Ontario, KIA 0T6

or contact the nearest Statistics Canada Reference Centre listed in this publication

If more convenient, fax your order to 1-613-951-1584 or call toll-free 1-800-267-6677 and use your VISA or MasterCard.

ecevez-vous directement vos informations sur l'économie canadienne?

Il est probable que vous passez des heures à lire plusieurs journaux et un paquet de revues pour essayer d'avoir une vue complète de la situation économique, et ensuite passer encore plus de temps à séparer le réel de ce qui ne l'est pas. Ne serait-il pas plus pratique (et beaucoup plus efficace) de remonter directement à la source?

Joignez-vous aux milliers de décideurs canadiens gagnants qui lisent *L'Observateur économique canadien* pour leur séance de rapport mensuelle. Rempli de renseignements disponibles nulle part ailleurs, l'OEC permet d'avoir une vue générale rapide et concise de l'économie canadienne. Il est inégalé par sa fiabilité et son exhaustivité.

ne seule source

Les consultations que nous avons eues avec nos nombreux lecteurs, des analystes financiers, des planificateurs, des économistes et des chefs d'entreprise, nous ont permis de présenter l'OEC dans son format actuel en deux parties, qui a été bien accueilli. La section de l'analyse contient des commentaires qui donnent à réfléchir sur la conjoncture économique, les problèmes, les tendances et les pour les indicateurs économiques essentiels : les marchés, les prix, le commerce, la démographie, le chômage et bien d'autres encore.

Plus pratique, plus simple, plus facile à utiliser qu'auparavant. L'Observateur économique canadien vous offre plus de 150 pages de renseignements poussés sous une seule couverture.

ourquoi acheter l'OEC?

En tant qu'abonné à l'OEC, vous étes<u>directement relié</u> aux analystes économiques de Statistique Canada. Le nom et le numéro de téléphone des experts qui peuvent vous aider à résoudre vos problèmes particuliers de recherche ou trouver des données spécialisées sont cités dans les articles et les rubriques de l'OEC.

Vous recevrez également un exemplaire gratuit du **Supplément statistique historique** annuel. Vous aurez ainsi devant vous soixante années de données rétrospectives et ce. <u>à titre gracieux</u>.

Pourquoi devez-vous donc attendre que d'autres publient les données de Statistique Canada qu'ils ont reprises alors que vous pouvez les obtenir directement à la source? Abonnez-vous à *L'Observateur économique canadien* dès aujourd'hui

Le prix de l'abonnement annuel à *L'Observateur économique canadien* (n° 10-230 au catalogue) est de 220 \$ au Canada, de 260 \$ US aux États-Unis et de 310 \$ US dans les autres pays.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on CD, diskette, computer print-out, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to Obtain More Information

Inquiries about this publication and the listed documents should be directed to:

Goods and Services Producing Industries Section, Prices Division,

Statistics Canada, Ottawa, K1A 0T6 Telephone: (1-819-951-8932) or to the Statistics Canada reference centre in:

Standards of Service to the Public

To maintain quality service to the public, Statistics Canada follows established standards covering statistical products and services, delivery of statistical information, cost-recovered services and service to respondents. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolinque et le système d'extraction de Statistique Canada.

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

Registered Trade Mark of Statistics Canada.

Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisées et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissem pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division du marketing, Statistique Canada, Ottawa, K1A 0T6 ou téléphonez à (613) 951-8200.

Marque déposée de Statistique Canada.

Révisions

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" – "Permanence of Paper for Printed Library Materials", ANSI Z39.48 – 1984.

This publication was prepared under the direction of:

- Louis Marc Ducharme, Director, Prices Division
- Robin Lowe, Chief, Goods & Services Producing Industries Section

Cette publication a été rédigée sous la direction de:

NOTE TO USERS

With the release of the April, 1994 issue of Catalogue 62-011, Industry Price Indexes, Statistics Canada published the Consulting Engineers Output Price Indexes (CEPI) for the first time.

These price indexes are published annually, from 1989 and are available in Tables 7 and 8.

For more information, contact Robin Lowe, Prices Division, 613-951-3370.

AVIS AUX UTILISATEURS

Statistique Canada, dans son édition d'avril 1994 de la publication Indices des prix de l'industrie (62-011), a publié pour la première fois, les indices de prix des sorties des services d'ingénieurs-conseils (IPIC).

Ces indices de prix sont publiés annuellement, remontent à 1989 et sont disponibles dans les tableaux 7 et 8.

Pour plus de renseignements, communiquez avec Bernard Lupien, Division des prix 613-951-9605.

Highlights

Industrial Product Price Index

According to preliminary figures, the year-over-year change in manufacturers' prices continued to climb in June, accelerating to 5.5% from 4.9% in May. This rate of change, which has been rising since January, reached its highest level since late 1982. The month-to-month increase was 0.6%.

Inflationary pressure continued to come almost entirely from intermediate goods while manufacturers' prices for consumer goods tended to remain stable overall or fell.

The year-over-year change in producer prices in Canada remained appreciably higher than the other members of the G7, the next highest being Italy (which has an appreciably higher level of inflation generally). This was consistent with the Canadian economy being further along in the recovery process than certain others in the G7. However, the structure of the Canadian manufacturing sector is much different than that in many of these countries, with the processing of raw materials and the export of these products playing a much larger role in Canada.

Annual inflation rates of producer prices

| Canada | 5.5% | June |
|---|---------------------------------------|---|
| Italy United Kingdom Germany United States France | 3.5% 2.0% 1.1% 0.0% -1.5% | March June May June 1st Quarter |
| Japan | -2.3% | May |

Price increases in June were widespread. Manufacturers saw prices rise in fourteen major product groups. The most significant increases were again for primary metal products, pulp, and wood products. Also of importance were the price increases for petroleum and coal products and for automobiles and other transportation equipment. Except for petroleum products, the largest proportion of all these products are exported.

Metals, Pulp and Paper, Lumber and Cars

The June increase in primary metal prices (+2.5%) was mainly due to increases in prices for copper and copper alloy products (+8.1%), aluminum products (+3.0%) and nickel products (+11.3%). These increases were encouraged by the ongoing gradual world recovery.

Faits saillants

Indice des prix des produits industriels

Selon les chiffres provisoire, la variation d'une année à l'autre des prix des fabricants a continué de progresser pour passer de 4,9% en mai à 5,5% en juin. Le taux de variation, qui a augmenté depuis janvier, a atteint son plus haut sommet depuis la fin de 1982. La croissance mensuelle a été établie à 0.6%.

La pression inflationniste a continué d'être en plus grande partie attribuable aux produits semi-finis, tandis que les prix des fabricants pour les biens de consommation sont demeurés stables dans l'ensemble ou ont chuté.

La variation d'une année à l'autre des prix des producteurs au Canada demeure beaucoup plus élevée que chez les autres membres du Groupe des Sept; l'Italie occupe, pour sa part, le deuxième rang (celle-ci affiche généralement un taux d'inflation considérablement plus élevé). La situation est parallèle à celle de l'économie canadienne, dont la reprise est plus avancée que l'économie de certains autres membres du Groupe des Sept. Cependant, la structure du secteur canadien de la fabrication diffère grandement de celle d'un bon nombre de ces pays, la transformation des matières brutes et l'exportation de ces produits jouant un rôle beaucoup plus important au Canada.

Taux d'inflation annuels des prix des producteurs

| Canada | 5,5% | Juin |
|---|--|--------------------------------------|
| Italie Royaume-Uni Allemagne États-Unis France Japon | 3,5% 2,0% 1,1% 0,0% -1,5% -2,3% | Mars Juin Mai Juin 1er trimestre Mai |

Les hausses des prix observées en juin ont touché nombre de secteurs. Les fabricants ont vu les prix augmenter pour quatorze grands groupes de produits. Les plus fortes augmentations ont été enregistrées au titre des produits métalliques primaires, de la pâte de bois et des produits du bois. On note aussi une croissance des prix des produits du pétrole et du charbon, des voitures et d'autre matériel de transport. La plus grande part de ces produits sont exportés, à l'exclusion des produits du pétrole.

Métaux, pâte et papier, sciages et voitures

La hausse des prix des produits métalliques primaires observée en juin (+2,5%) était principalement attribuable à une croissance des prix des produits du cuivre et des alliages de cuivre (+8,1%), des produits de l'aluminium (+3,0%) et des produits du nickel (+11,3%). Ces gains ont été stimulés par la reprise graduelle de l'économie mondiale.

Pulp prices were up 5.2% in June, with domestic prices increasing faster than export prices. For sulphate wood-pulp, domestic prices were up 9.3% compared to 6.0% for export prices. Domestically, the impact of increased demand was reinforced by concern over a possible strike in the pulp industry in British Columbia. Overall prices for newsprint also rose in June as export prices increased while domestic prices continued to fluctuate.

Prices for lumber, sawmill, and other wood products continued to recover, increasing by 1.6%. Price increases ranged from 1.5% in the interior of British Columbia to 6.9% in Quebec.

The 0.4% increase in transport equipment prices was primarily due to a 0.7% increase in the export prices for automobiles and trucks. These increases were mainly due to the 0.8% appreciation of the US dollar against the Canadian dollar, which increased the value of US dollars paid to Canadian producers. The value of the American dollar was 8.6% higher than in June

Inflationary Pressures

Inflationary pressures in June came principally from a number of processed raw materials, and certain other intermediate goods, where much of the output is These inflationary pressures were exported. reinforced by the increase in the value of the US dollar. There was, however, only a marginal increase in inflationary pressures in the finished good category. The overall effect on the Canadian economy is likely to be an improved profit picture for exporting Canadian manufacturers but relatively little upward pressure on the Consumer Price Index.

Both first-stage and second-stage intermediate goods contributed to the inflationary pressure on manufactuers' prices.

For the first-stage intermediate category of goods, inflationary pressure came primarily from pulp and products made from copper and copper alloy, aluminum and nickel. Overall, the year-over-year change in prices for first-stage intermediate goods jumped to 14.5% in June. This was its highest level since June 1988. Nevertheless, although prices for first-stage intermediate goods have been rising for the last seven months, they have only regained their levels of the start of 1991.

For the second-stage intermediate goods category, the year-over-year price change increased to 5.2% from 4.4%. Overall prices for this category rose by 0.6% from May to June, with lumber and timber (+2.9%) and newsprint (+1.5%) having the greatest impact. The 1.1% increase for petroleum and coal products also contributed to the inflationary pressures in this category.

Les prix de la pâte de bois se sont accrus de 5,2% en juin. les prix canadiens ayant progressé plus rapidement que les prix à l'exportation. En ce qui a trait à la pâte de bois au sulfate, les prix canadiens ont augmenté de 9,3% par rapport à 6,0% pour les prix à l'exportation. Au Canada, les effets de la hausse de la demande ont été renforcés par la crainte d'une grève possible dans le secteur des pâtes à papier en Colombie-Britannique. Dans l'ensemble, les prix du papier journal ont également progressé en juin avec la hausse des prix à l'exportation, tandis que les prix canadiens ont continué de fluctuer.

Les prix des sciages, des produits de scierie et des autres produits du bois ont continué de se redresser, soit de 1,6%. Les gains ont varié entre 1,5% dans la région intérieure de la Colombie-Britannique et 6,9% au Québec.

La croissance de 0,4% des prix du matériel de transport était principalement attribuable à une augmentation de 0,7% des prix à l'exportation des automobiles et des camions. Ces hausses ont été en plus grande partie attribuées à la hausse de 0,8% du dollar américain par rapport au dollar canadien, ce qui a eu pour effet d'accroître la valeur de l'argent américain versé aux producteurs canadiens. La valeur du dollar américain était de 8,6% supérieure au niveau observé en juin 1993.

La pression inflationniste

La pression inflationniste observée en juin a été surtout amenée par un certain nombre de matières brutes transformées et certains autres produits semi-finis dont la plupart sont exportés. Cette pression a été renforcée par la hausse de la valeur du dollar américain. On n'a toutefois observé qu'une faible augmentation de la pression inflationniste au niveau des produits finis. Cette situation aura probablement pour effet global d'accroître les bénéfices des fabricants canadiens de produits d'exportation, mais ne fera progresser que très peu l'indice des prix à la consommation.

La pression inflationniste observée sur les prix des fabricants est en partie attribuable aux produits semi-finis de première étape et de deuxième étape.

En ce qui concerne les produits semi-finis de première étape, la pression inflationniste a été amenée surtout par la pâte de bois, les produits du cuivre et les alliages de cuivre, les produits de l'aluminium et du nickel. Dans l'ensemble, la variation d'une année à l'autre des prix des produits semi-finis de première étape a bondi pour atteindre 14,5% en juin, soit le plus haut niveau enregistré depuis juin 1988. Toutefois, bien que les prix des produits semi-finis de première étape progressent depuis sept mois, ils n'atteignent que les niveaux observés au début de 1991.

La variation d'une année à l'autre des prix des produits semifinis de deuxième étape s'est accrue pour passer de 4,4% à 5,2%. Les prix de l'ensemble des produits de cette catégorie ont progressé de 0,6% de mai à juin, les sciages et le bois d'oeuvre (+2,9%) et le papier journal (+1,5%) ayant le plus contribué à la hausse. Les produits du pétrole et du charbon ont également contribué à la pression inflationniste avec ur gain de 1.1%.

The overall price level for finished goods in June rose 3.3% with the year-over-year change in the finished goods prices edging up to 3.3% from 3.2%. Inflationary pressure, however, only increased in the capital equipment category where the year-over-year change in prices rose from 4.3% to 4.5% as transportation equipment prices increased. The year-over-year change in prices for foods and feeds dropped from 1.4% to 1.3%, while for other finished goods it remained at 3.7%

Bi-Annual Review

During the first six months of 1994, prices both in the forestry industries (including wood, pulp, and paper) and in the non-ferrous metal industries were very active. All these industries played important roles in the increase in the year-over-year level of price changes for intermediate products.

The overall price level in the paper and allied product industry has been increasing since December 1993. The seasonally adjusted level of shipments in these industries increased noticeably after October 1993 and moved up again in March and April in 1994.

Pulp prices reached a trough in November 1993 and have been rising since December while pulp exports have been tending to increase since October. The recovery in newsprint prices began in January while newsprint exports have been tending to increase since September.

The decline of wood industry shipments over the winter of 1994, in response to higher interest rates and bad weather, coincided with a plateauing of prices in this industry. Price levels did not noticeably decline, however, until April when seasonally adjusted shipments were already recovering. The decline proved short-lived as prices began to recover in May as shipments continued to increase.

The rise in wood prices during the last two quarters of 1993 and the increases in pulp and paper prices in the last quarter of 1993 and first quarter of 1994 have had a strong effect on profit levels in these industries. This continues the clear relationship between prices and profits in this area which has existed for the last three and a half years.

The high level of Canadian shipments in the non-ferrous metal refining and smelting industry during the last two quarters of 1993 coincided with high foreign production and a generally weak world economy to produce low prices. As 1994 opened, an international agreement to restrict output, and a recovering world economy acted together to begin a recovering world economy acted together to begin a recovery in non-ferrous metal price levels. Then, as world output recovered, and prices continued to rise, shipments also recovered. The business media, however, remains concerned about the speculative component of the price increase and is uncertain as to whether the improved level of prices will continue to prove robust or whether production will outrun demand leading to a new decline in price levels.

Le niveau global des prix des produits finis a progressé de 0,3% en juin, la variation d'une année à l'autre n'ayant augmenté que légèrement, soit de 3,2% à 3,3%. Toutefois, la pression inflationniste ne s'est accrue qu'au niveau du matériel capitalisé, la variation d'une année à l'autre des prix étant passée de 4,3% à 4,5% avec la hausse des prix du matériel de transport. En ce qui concerne les aliments de consommation et les aliments pour animaux, la variation des prix d'une année à l'autre a chuté pour passer de 1,4% à 1,3%, tandis que la variation des prix d'autres produits finis est demeurée stable à 3,7%.

Revue Semestrielle

Pendant les six premiers mois de 1994, les prix ont beaucoup évolué dans le secteur de l'exploitation forestière (y compris le bois, la pâte et le papier) et dans celui des métaux non ferreux. Ces secteurs ont contribué de façon importante à la croissance de la variation d'une année à l'autre des prix des produits semi-finis.

Le niveau global des prix du papier et des produits connexes progresse depuis décembre 1993. Le niveau des livraisons dans ces secteurs, après désaisonnalisation, s'est accru considérablement après octobre 1993 et a bondi à nouveau en mars et en avril 1994.

Les prix de la pâte ont atteint un creux en novembre 1993, mais augmentent depuis décembre; par ailleurs, les exportations de pâte ont affiché une croissance depuis octobre. Le redressement des prix du papier journal a débuté en janvier, tandis que les exportations de ce produit ont affiché une hausse depuis septembre.

La baisse des livraisons dans le secteur du bois au cours de l'hiver de 1994, qui est attribuable à une hausse des taux d'intérêt et au mauvais temps, a coïncidé avec la stagnation des prix dans ce secteur. Le niveau des prix n'a pas beaucoup diminué toutefois, avant avril, alors qu'on observait déjà un redressement des livraisons après désaisonnalisation. Cette baisse n'a pas duré, les prix ayant commencé à augmenter en mai avec l'accroissement continu des livraisons.

La progression des prix du bois au cours des deux derniers trimestres de 1993 et celle des prix de la pâte et du papier au dernier trimestre de 1993 et au premier trimestre de 1994 ont influé considérablement sur les bénéfices enregistrés dans ces secteurs d'activité. On continue donc de constater qu'il existe un lien indubitable depuis trois ans et demi dans ce secteur entre les prix et les bénéfices.

Le niveau élevé des livraisons canadiennes dans le secteur de la fonte et de l'affinage des métaux non ferreux au cours des deux derniers trimestres de 1993 a contribué, avec la hausse de la production étrangère et la faiblesse générale de l'économie mondiale, à faire chuter les prix. Au début de 1994, la signature d'un accord international de contrôle de la production et la reprise de l'économie mondiale ont eu pour effet de faire monter à nouveau les prix des métaux non ferreux. Par la suite, avec la reprise de la production mondiale et la hausse continue des prix, le nombre de livraisons s'est également redressé. Le milieu des affaires demeure toutefois inquiet du caractère spéculatif de la hausse des prix et se demande si l'augmentation des prix se poursuivra ou si la production dépassera la demande pour faire chuter à nouveau les prix.

During the first half of 1994, prices have tended to increase slowly in many of the major categories of industrial production. Since December, the overall price level was up 1.4% for meat, fish and dairy products, 1.7% for other food and feed products, 1.9% for metal fabricated products, 1.3% for machinery and equipment, and 1.3% for electronic and communications equipment. Prices for textiles and clothing have also tended to increase slowly. The price level in the automobiles, trucks, and other transport equipment category has tended to follow movements in the exchange rate. Since December, petroleum and coal products increased 5.5% and cheminal prices were up 2.5%.

Au cours de la première moitié de 1994, les prix ont progressé lentement dans nombre des principales catégories de produits industriels. Depuis décembre, le niveau global des prix a augmenté au titre des viandes, poissons et produits laitiers (+1,4%), des autres aliments de consommation et aliments pour animaux (+1,7%), des semi-produits métalliques (+1,9%), des machines et du matériel (+1,3%) et des appareils électroniques et de communications (+1,3%). Les prix des produits textiles et des vêtements ont également progressé lentement. Le niveau des prix des automobiles, des camions et d'autre matériel de transport a suivi les variations du taux de change. Les prix des produits de pétrole et du charbon se sont accrus de 5,5% depuis décembre, tandis que les prix des produits chimiques ont affiché un gain de 2,5%.

Highlights

Raw Materials Price Index

The Raw Materials Price Index (RMPI, 1986 = 100), which measures the change in prices paid by manufacturers for raw materials, rose 2.2% between May and June 1994. This increase was mainly due to higher prices for crude oil (+7.8%), and non-ferrous metals (+5.5%). Lower prices for cattle-for-slaughter, (-7.0%) and iron and steel scrap (+10.0%) moderated the overall increase.

The year-over-year change in raw material prices has been gradually increasing since the beginning of the year, from 1.7% in January to 7.9% this June. However, raw material prices over the last six months alone have increased 14.2%. This was primarily due to higher prices for crude oil (+40.3%), non-ferrous metals (+25.6%), wood (+6.5%) and vegetable products (+9.4%).

Most of the increase in crude oil prices occurred since March (+36.0%). Crude oil prices in June were comparable to prices in November 1992. Current OPEC production controls and slowly increasing worldwide industrial activity should maintain a strong basis for present or increased prices for crude oil.

Prices for non-ferrous metals have been rebounding, especially in the latest six months. Overall price levels in June were comparable to prices in mid-1989. Published reports note that one factor behind higher metal prices was the speculative investment of hedging against anticipated inflation. As well, increased demand for certain metals, particularly copper, has combined to increase non-ferrous metal prices. Notable price increases for metals over the last six months were for copper (+45.0%), nickel (+34.0%) and aluminum materials (+37.0%).

Aluminum prices have been steadily increasing with the slow depletion of the abundant world aluminum inventory. The major aluminum producers agreed in Brussels, in January, to reduce output by 10.0%. This control along with potentially new markets for aluminum should shift the supply/demand balance in favour of the producer.

Raw material prices for wood have been edging up monthly since November 1993. Over this period prices for logs increased by eleven per cent and pulpwood rose by four per cent. Log prices, having reached an all-time peak in July 1993, later declined for a few months. They have since slowly climbed to a level two per cent higher than the last peak.

Faits saillants

Indice des prix des matières brutes

D'aprés les chiffres préliminaires l'indice des prix des matières brutes (IPMB, 1986 = 100) a progressé de 2,2% entre mai et juin 1994. Cette augmentation est due surtout à l'accroissement des prix du pétrole brut (+7,8%) et des métaux non ferreux (+5,5%). La baisse des prix des bovins envoyés à l'abattage (-7,0%) et des déchets de fer et d'acier (-10,0%) a freiné la progression globale.

Le taux d'accroissement d'une année à l'autre des prix des matières brutes a augmenté progressivement depuis le début de l'année, de 1,7% en janvier à 7,9% en juin. Toutefois, les prix des matières brutes ont augmenté de 14,2% uniquement au cours des six derniers mois. Cela s'explique principalement par la montée des prix du pétrole brut (+40,3%), des métaux non ferreux (+25,6%), du bois (+6,5%) et des substances végétales (+9,4%).

Les prix du pétrole brut ont augmenté depuis le début de l'année, la plus grande partie de la hausse ayant été produite depuis mars (+36,0%). Les prix du pétrole brut en juin étaient comparables à ceux de novembre 1992. L'actuelle régulation de la production par l'OPEP et la lente reprise de l'activité industrielle mondiale devraient maintenir les prix du pétrole brut à leurs niveaux actuels, et même les porter à des niveaux encore plus élevés.

Les prix des métaux non ferreux sont en pleine remontée, surtout depuis les derniers six mois. Dans l'ensemble, les niveaux des prix en juin étaient comparables à ceux du milieu de 1989. Les rapports publiés indiquent que les prix des métaux ont augmenté en raison notamment des opérations de couverture, une manoeuvre spéculative à laquelle les investisseurs ont recours pour se protéger des éventuelles poussées inflationnistes. De plus, l'accroissement de la demande pour certains métaux, en particulier le cuivre, a exercé un effet d'entraînement sur les prix des métaux non ferreux. Au cours des six derniers mois, des hausses de prix notables ont été observées pour les métaux suivants : cuivre (+45,0%), nickel (+34,0%) et aluminium (+37,0%).

Les prix de l'aluminium ont constamment augmenté à mesure que diminuaient les importants stocks mondiaux de ce métal. Les grands producteurs d'aluminium du monde se sont réunis à Bruxelles en janvier et ont convenu de réduire leur production de 10,0%. Cette régulation de l'offre, conjuguée avec de nouveaux débouchés potentiels pour l'aluminium, devrait faire pencher la balance en faveur des producteurs.

Pour ce qui est du bois, des hausses de prix ont été observées à chaque mois depuis novembre 1993. Au cours de cette période, les prix des billes ont progressé de onze pour cent et ceux du bois à pâte, de quatre pour cent. Les prix des billes, qui avaient atteint un sommet sans précédent en juillet 1993, ont ensuite diminué pendant quelques mois mais ont finalement remonté lentement pour dépasser de deux pour cent l'ancien sommet.

In June, lower prices for wheat (-7.7%) and barley (-2.1%) slowed the monthly vegetable products price change to 0.5%. Canola prices increased 2.4%, and year-over-year prices were up over 50.0%. If the present good weather conditions persist then record crops are possible for many crops this fall. This could dampen prices for many crops such as wheat, canola and corn.

Iron and steel scrap prices declined again in June. After increasing consistently since December 1992 to April 1994 (+54.0%), iron and steel scrap prices, have decreased 15.0% over the last two months. Increased activity in the steel mills itself has increased the stock of scrap, thereby providing some downward pressure on prices.

En juin, le recul des prix du blé (-7,7%) et de l'orge (-2,1%) a limité la variatioelle des prix des substances végétales à 0,5%. Les prix du canola ont grimpé de 2,4% d'un mois à l'autre et de plus de 50,0% d'une année à l'autre. Si le beau temps se maintient, les récoltes de nombreuses cultures atteindront peut-être des niveaux records à l'automne. Cela pourrait avoir un effet modérateur sur les prix de bien des cultures, notamment le blé, le canola, et le maïs.

Les prix des déchets de fer et d'acier ont encore fléchi en juin. Après avoir été en constante progression entre décembre 1992 et avril 1994 (+54,0%), les prix des déchets de fer et d'acier ont reculé de 15,0% au cours des deux derniers mois. Les aciéries ont accru leurs activités de sorte que les stocks de déchets ont augmenté, ce qui a freiné les prix.

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

These indexes are preliminary.

Ces indices sont provisoires.

The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

L'agrégation des indices par produits ou par industries devrait résulter en un même grand total. Corsque ces totaux différent occasionnellement en raison de l'arrondissement, l'Indice total – Tous les produits devra être considéré comme celui qui fait autorité, et l'Indice total – Toutes les industries manufacturières sera posé égal. (1) (1) (2) (2)

Note: Indexes for the most recent six months shown are subject to revision.

Note: Indexes for the most recent six months shown are subject to revision.

Note: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity, code (from 9 to 28) mm indicates the M-level commodity code (from 4 to 48, 45 to 69) nn indicates either a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates steries a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-556).

(1) En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique.

(Catalogue 62-556).

En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (Dinnann), un numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique prend la forme générale se-mm-nn-pppp-rr où: si indique le code du niveau S des produits (de 9 à 28) as indique le code du niveau M des produits (de 14 à 43, 45 à 69) mm indique le code du niveau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les indices particullers. In ni indique le code d'un levau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les indices particullers. Pppp indique le code GPP (sauf pour certains agrégats spéciaux qui comprenent plusieurs GPP) ri indique une composante d'un GPP.

La mesure du dégré de couverture pour les indices élémentaires est présenté à l'aide d'un symbole: E Indique un échantillonage exhaustif, S Indique un échantillonage sommaire et P indique une estimation indirecte. Pour les indices composites, la donnée en pourcentage représente une estimation du degré de couverture par échantillonage direct (E+S). Ces mesures du dégré de couverture sont parfois arrondies au 5% le plus prés afin d'assurer la confidentialité. Le suntée mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un

l'arrondissement, l'indice total - tous les produits davie et le consider de la consideration de la consid

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

1 The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the Commodities Index shall be regarded as authoritative, and the All Manufacturing industries is adjusted to match.

1 L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison l'arrondissement, l'indice total - tous les produits devra être considére comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières s' posé égal.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industrial Product Price Indexes, 1986 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1986 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about four weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES INDICES DES PRIX INDUSTRIELS

Indices des prix des produits industriels, 1986 = 100

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1986. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonnage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (nº 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication nº 62-011 au catalogue, *Indices des prix de l'industrie*, paraît quatre semaines environ après le communiqué dans le CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précéden devient final. Les exceptions à cette règle sont signalées.

Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprèt d'environ 3,500 producteurs pour des biens vendus qui son évalués à la limite de l'établissement, de sorte que les taxe prélevées à ce point et le coût du transport fourni par le transporteurs communs au-delà de ce point sont exclus. Le prix sont relevés pour des transactions à un niveau trè détaillé, qui permet d'identifier le bien et les conditions d vente. De tels relevés sont institués pour les produit importants. Des élargissements sont apportés au échantillons pour lesquels le mouvement des prix a un dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisar directement l'objet d'un sondage se fait habituellement paune méthode d'échantillonnage probabiliste, selon laquelle le producteurs importants sont des répondants "obligatoires tandis que l'on procède à une sélection aléatoire de producteurs moins importants. Ces échantillor

sont reconstruits régulièrement, suivant l'évolution du marche. Un indice élémentaire donné repose habituellement sur 12 15 prix, bien que certains peuvent utiliser aussi peu que prix, ou jusqu'à 30 prix.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1986. The price movement for the remaining 300 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement rom other price series.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1986. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

Neight Base

Commodity and industry weights are taken from the 'Make" matrix of the 1986 Input/Output table which, in turn, is derived from 1986 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in production patterns.

Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1986, laquelle à son tour est établie à partir des valeurs de 1986 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are ntroduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where wi are the values of the output of each commodity:

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w^l sont les valeurs de la production de chaque produit:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

 \sum_{i}

(agg)
Pt/o denotes the composite price index movement between the base period o and time t for the defined aggregate;

(agg)
P_{t/o}
dénote le mouvement de l'indice composite de prix entre la période de référence o et la période t pour l'agrégat défini;

is the transaction value of the element i in the base period;

est la valeur de transaction de l'élément i au cours de la période de référence;

is the price index for element i, meaning its price change from the base period to time t;

est l'indice de prix de l'élément i, désignant sa variation de prix entre la période de référence et la période t;

indicates summation over all elements i in the defined aggregate.

signifie la sommation de tous les éléments i dans l'agrégat défini.

Historical Data

Historical series on the 1986 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1986-based Industrial Product Price Indexes (IPPI) series and the corresponding 1981-based Industrial Product Price Indexes (IPPI) series, using the year 1986 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both set of IPPI series are available to the public.

Reference Documents

62-558 Industry Price Indexes, 1986 = 100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures.

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone 951-3350, facsimile (613)951-2848.

Données historiques

Les séries historiques sur la base 1986 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits (IPPI) basées sur 1986 et des séries industriels correspondantes des indices des prix des produits industriels (IPPI) basées sur 1981, l'année 1986 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les deux ensembles de séries IPPI sont disponibles au public.

Documents de référence

62-558 Indices des prix de l'industrie, 1986 = 100: Guide aux utilisateurs, 40,00 \$.

Cette publication précise sommairement le contenu économique des séries dans un cadre général, de même qu'une brève description des différentes structures d'agrégation. Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats de produits. Y figurent également une description des caractéristiques des indices élémentaires. La publication contient des commentaires sur l'utilisation des indices.

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes, 25,00 \$.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6 téléphone 951-3350, télécopieur (613)951-2848.

AW MATERIALS PRICE INDEXES (1986 = 100)

he Raw Materials Price Indexes (RMPI) measure rice changes for the purchase of raw materials by anadian industry. The term "raw material" refers ither to a commodity that is sold for the first time fter being extracted from nature, or a substitutable expeled product (e.g. metal scrap). For example the result is considered as a raw material, but wheat flour not, iron ore is but not pig iron, coal but not lectricity. Approximately eighty commodities are riced in the index, grouped into seven major components.

he index and the major group indexes, on a 1986 ime base, are published monthly in the Daily Bulletin approximately five weeks after the end of the eference month. They are also available at that time in CANSIM in matrix 2009.

These indexes are a continuation of the previously published Raw Materials Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their aquivalents in the 1981 = 100 series using the link actors which were released in the July 1990 issue and repeated in the December issue of this publication.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally or further processing, and does not cover exports or lows of raw materials directly to final demand principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, axes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the burchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some ivestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

INDICES DES PRIX DES MATIÈRES BRUTES (1986 = 100)

Les indices des prix des matières brutes (IPMB) mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1986, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 2009 de CANSIM.

Ces indices constituent la suite des Indices des prix des matières brutes, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990, et répétés dans le numéro de décembre de la présente publication.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes nettes payées et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

Bien qu'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1986 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la moyenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

Les pondérations furent dérivées des tableaux d'entréessorties de 1986, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| • 100 | movement between the base period o and time t for the defined aggregate; | 100 | entre la période de référence o et la période courante t pour l'agrégat spécifié; |
|------------------|--|------------------|--|
| wi | is the transaction value of the element i in 1986; | Wį | est la valeur de transaction de l'élément i en 1986; |
| P _{t/o} | is the price index for element i, meaning its price change from the base period o to time t: | P _{t/o} | est l'indice de prix de l'élément i, c'est-à-dire son changement de prix de la période de référence o à la période courante t: |

(agg)

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

ing to their market share in a recent stances, where data are not available, ons are equally weighted. pondérés selon leurs parts du marché pour une année récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1986 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1986 as a time reference base and the weights used are 1986 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1986=100, technical notes presented above. The indexes are available on CANSIM in matrix 2020. Indexes for the current year and the previous year are subject to revision.

These indexes are a continuation of the previously published Electricity Selling Price Indexes, 1981 = 100. The new, 1986 = 100 indexes can be linked with their equivalents in the 1981 = 100 series using the link factors which were released in the July 1990 issue and repeated in the December issue of this publication.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone 951-3350, facsimile (613)951-2848.

INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1986 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de référence 1986, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1986, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1986 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 2020. Les indices de la présente année et de l'année précédente sont sujets à révision.

Ces indices constituent la suite des indices des prix de vente de l'énergie électrique, 1981 = 100, précédemment publiés. Les nouvelles séries basées 1986 = 100 peuvent être raccordées à leurs séries équivalentes basées 1981 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de juillet 1990 et répétés dans le numéro de décembre de la présente publication.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, téléphone 951-3350, télécopieur (613)951-2848.

CONSULTING ENGINEERS' OUTPUT PRICE INDEXES (1992 = 100)

The consulting engineers' output price indexes (CEPI) measure the price changes of the services provided by consulting engineers. These services, which include advisory work, design work and supervision of its implementation, and project management, are provided for a variety of projects, and in different parts of the country. The data published in Tables 7 and 8 include indexes (column A in the tables) for 13 different fields of specialization, corresponding to those in the Survey of Consulting Engineers. For some fields of specialization indexes for different regions of the country are provided. An index for foreign projects is also given.

Indexes are published annually, approximately three months after the end of each calendar year. They are available at that time on CANSIM in matrices 2047, 2048 and 2049, or from Prices Division. Indexes for the latest year are subject to revision.

These indexes, dating from 1989, are the first to cover these activities. They are based on information from a sample of consulting engineering firms in Canada. The overall indexes are calculated by combining indexes for three separate measures: wage and salary rates, realized net multipliers (or fee-to-direct salary ratios), and output per unit of labour input (or labour productivity). Indexes are published for the changes in wage and salary rates, and in realized net multipliers, in columns B and C, respectively.

Respondents provide wage and salary movements, as they determine rates, usually annually. For each respondent this is the average of changes in the rate that would be paid to someone of certain abilities with a certain level of experience. It is not the change in average wages and salaries paid, because that would change with the mix of employees and experience. Respondents provide information on their realized net multipliers annually at the end of their financial year. Each respondent provides individual multipliers for each segment of activity for which the mark-up may differ. This may be as detailed as a specialization in one region, but the same multiplier may apply to more than one specialization or more than one region. In those cases the report is used as an observation in each of the areas covered As the multipliers are realized figures, after the year is over, they reflect what was actually earned as a ratio of direct salaries. rather than what might have been intended. Productivity adjustments are calculated at a more aggregative level and applied evenly to all regions and specialities.

The finest market identified is for a field of specialization in a region. Six regions in Canada are identified: Atlantic provinces, Quebec, Ontario, Manitoba/Saskatchewan, Alberta, and British Columbia. Regional indexes are calculated for buildings,

INDICES DE PRIX DES SORTIES DES SERVICES D'INGÉNIEURS-CONSEILS (1992 = 100)

Les indices de prix des sorties des services d'ingénieurs-conseils (IPIC) mesurent les variations de prix des services fournis par les ingénieurs-conseils. Ces services, qui comprennent des services de consultation, des travaux de conception et la surveillance de leur mise en oeuvre et des services de gestion de projets, sont offerts pour une variété d'activités et dans différentes régions du pays. Les données publiées aux tableau 7 et 8 comprend les indices (colonne A dans les tableaux) de 13 différents domaines de spécialisation correspondant à ceux qui font l'objet de l'Enquête auprès des ingénieurs-conseils. Dans certains domaines de spécialisation, les indices sont établis pour différentes régions du pays. On trouve également un indice des projets réalisés à l'étranger.

Les indices sont publiés chaque année, environ trois mois après la fin de l'année civile. On peut alors les extraire de la base CANSIM dans les matrices 2047, 2048 et 2049 ou les obtenir auprès de la Division des prix. Les indices de la dernière année font l'objet d'une révision.

Ces indices, qui remontent à 1989, sont les premiers à couvrir de telles activités. Ils sont fondés sur des renseignements obtenus auprès d'un échantillon des entreprises d'ingénieurs-conseils du Canada. Les indices d'ensemble sont calculés en groupant les indices établis selon trois différentes mesures : les taux de salaires et de traitements, les multiplicateurs nets réels (ou les ratios des honoraires aux traitements directs) et la production par unité de main-d'oeuvre (ou productivité du travail). Les indices présentent, dans les colonnes B et C respectivement, les variations des salaires et des traitements, ainsi que des multiplicateurs nets réels.

Les répondants fournissent, chaque année habituellement, les données sur les mouvements des salaires et des traitements. car ces mouvements déterminent les taux. Pour chaque répondant, il s'agit de la variation moyenne du taux de rémunération qui serait versé à une personne possédant certaines compétences et une certaine expérience. Il ne s'agit pas de la variation des salaires et des traitements moyens versés, car ces derniers varient en fonction de la composition et de l'expérience des employés. Chaque année, à la fin de leur exercice, les répondants fournissent les données sur leurs multiplicateurs nets réels. Chaque répondant fournit ses multiplicateurs propres pour chaque segment d'activité pour lequel la majoration peut varier. Les renseignements fournis peuvent être aussi détaillés qu'une spécialisation dans une région donnée; cependant, on peut appliquer le même multiplicateur à plus d'une spécialisation ou d'une région. Dans ces cas, le rapport sert de rapport d'observation pour chacune des régions étudiées. Comme les multiplicateurs sont réels, ils représentent, à la fin de l'année, la rémunération réelle en ratio des traitements directs plutôt que la rémunération prévue. Les ajustements de la productivité sont calculés à un niveau plus agrégatif et appliqués équitablement à toutes les régions et spécialisations.

L'indice le plus détaillé est celui du domaine de spécialisation dans une région donnée. Il existe six régions au Canada : les provinces de l'Atlantique, le Québec, l'Ontario, le Manitoba/ Saskatchewan, l'Alberta et la Colombie-Britannique. Les indices des régions sont calculés pour les bâtiments, les

transportation, municipal services, and other environmental services. Canada indexes only are calculated for individual industrial specialities. However, the index for all industrial services differs from region to region because of the different mix of industrial projects.

The indexes at the finest level of detail are calculated as unweighted geometric averages of the returns from individual respondents. These indexes are aggregated to more general indexes using fixed weights. For combining regional indexes within a field of specialization the geographical distributions from the Survey of Capital Expenditures, 1989, 1990 and 1991 were used. For combining indexes for fields of specialization weights were taken from the Survey of Consulting Engineers for 1989 and 1991.

For further information: Please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6. For data only please contact the Information Unit in Prices Division at 613-951-3350, (fax: 613-951-2848), or any regional office, whose addresses and phone numbers are on the inside front cover of this book. For further information on concepts and methods, contact Robin Lowe (613-951-3370), or Bernard Lupien (613-951-9605).

transports, les services municipaux et d'autres services environnementaux. Les indices pour le Canada seulement sont calculés pour chaque spécialisation industrielle. Cependant, l'indice de l'ensemble des services aux entreprises diffère d'une région à l'autre en raison de la variété des projets des entreprises.

Les indices les plus détaillés sont calculés en tant que moyennes géométriques non pondérées des chiffres fournis par les répondants. Ces indices sont groupés sous forme d'indices plus généraux à pondération fixe. Pour grouper les indices régionaux d'un même domaine de spécialisation, on se fonde sur la répartition géographique de l'Enquête sur les dépenses d'immobilisations de 1989, de 1990 et de 1991. Pour grouper les indices des domaines de spécialisation, on se sert des poids appliqués dans le cadre de l'Enquête auprès des ingénieurs-conseils de 1989 et de 1991.

Pour plus de renseignements, communiquer avec la Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6. Pour obtenir des données seulement, communiquer avec la Soussection de l'information de la Division des prix au numéro 613-951-3350 (téléc. : 613-951-2848) ou avec les bureaux régionaux dont les coordonnées figurent au dos du plat supérieur de la présente publication. Pour plus de renseignements sur les concepts et les méthodes, communiquer avec Robin Lowe (613-951-3370) ou Bernard Lupien (613-951-9605).

Canada challenges the imagination. Imagine a country where Newfoundlanders live closer to Africans than they do to fellow Canadians in British Columbia. Or a country with an island that has a glacier bigger than Ireland. Imagine a country with two million lakes, and the world's longest coastline – but that shares a border with only one nation.

Statistics Canada has created the 54th edition of Canada: A Portrait as a celebration of our great

nation. Drawn from Statistics Canada's rich palette of national data, it paints a picture of where we are socially, economically, culturally and politically.

Over 60 unique and beautiful photographs combined with lively text, provide a close-up look at the Canada of today.

Experience this land's remarkable natural regions and diverse human landscape through six chapters entitled: This Land,
The People, The Society,
Arts and Leisure,
The Economy, and
Canada in the World.

Eminent Canadians such as astronaut Roberta Bondar, former hockey star Jean Béliveau, and writer W.O. Mitchell have contributed their personal visions of Canada.

Canada: A Portrait is a beautiful illustration of the Canada of today.

Presented in a 30 cm X 23 cm (12 1/4" X 9") format, prestige hardcover, with over 200 pages, *Canada: A Portrait* (Catalogue No. 11-403E) is available in Canada for \$38.00 plus GST, US \$41.95 in the United States, and US \$48.95 in other countries.

To order write Statistics Canada, Publications Sales, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication. For faster ordering call toll-free 1-800-267-6677 and use your VISA and MasterCard or fax your order to (613) 951-1584.

Le Canada est un pays qui défie l'imagination. Imaginez un pays où les Terre-Neuviens vivent plus près des Africains que de leurs compatriotes de la Colombie-Britannique. Un pays où se trouve une île sur laquelle s'étend un glacier plus grand que l'Irlande. Imaginez un pays qui compte 2 millions de lacs et le plus long littoral du monde, et pourtant un seul voisin.

Statistique Canada a créé la 54^e édition d'**Un** portrait du Canada pour célébrer la grandeur de

notre pays. C'est à partir du riche éventail de données nationales de Statistique

Canada que l'on a brossé ce tableau de notre situation sociale, économique, culturelle et politique.

Plus de 60 magnifiques photos, mariées à un texte vivant, offrent une vision claire et détaillée de ce qu'est le Canada d'aujourd'hui.

Découvrez les splendides régions naturelles de ce pays, de même que son paysage humain des plus diversifiés, à travers six chapitres intitulés :

Le territoire, La population, La société, Les arts et les loisirs, L'économie et Le Canada dans le monde.

D'éminents Canadiens, tels Roberta Bondar, astronaute, Jean Béliveau, ancienne vedette de hockey, et W.O. Mitchell, écrivain, y font part de leur vision personnelle du Canada.

Un portrait du Canada... un magnifique ouvrage de collection qui décrit admirablement bien le Canada d'aujourd'hui.

Présenté dans un format de 30 cm sur 23 cm (12,25 po X 9 po), dans une couverture rigide de luxe et en plus de 200 pages, *Un portrait du Canada* (Nº 11-403F au catalogue) coûte 38 \$ plus TPS au Canada, 41,95 \$ US aux États-Unis et 48,95 \$ US dans les autres pays.

Pour commander, écrivez à Statistique Canada, Vente des publications, Ottawa (Ontario), K1A 076 ou communiquez avec le Centre régional de consultation de Statistique Canada le plus proche. La liste figure dans la publication. Pour commander plus rapidement, composez sans frais le 1-800-267-6677 et utilisez votre carte VISA ou MasterCard ou télécopiez votre commande au (613) 951-1584.

MERCI DE VOTRE COMMANDE!

Statistique Canada Statistics Canada Canada

THE MARKET RESEARCH HANDBOOK 1993/1994

1991 CENSUS INCLUDED

The fastest way to get off to a good start!

Brainstorming with your colleagues produces some great marketing ideas. But which ones will you use? The

Market Research Handbook can help you narrow

your options before you commit any more time and resources to developing your strategy.

This handbook is the most comprehensive statistical compendium on Canadian consumers and the businesses that serve them. It helps you to identify, define and locate your target markets.

Looking for...

- ...socio-economic and demographic profiles of 45 urban areas?
- ...revenue and expenditure data for retailers and small businesses?

The **Market Research Handbook** has it all... and more. It provides information on:

- 1991 Census information
- personal expenditures on goods and services
- size and composition of households and families
- wages, salaries and employment
- investment in Canadian industries
- labour force in various industries
- industry and consumer prices

It has been one of our bestsellers since 1977 for the simple reason that it offers such a range and depth of market data. Save time and money when you're looking for data or data sources, keep the **Market Research Handbook** close at hand for

Research Handbook close at hand for easy reference.

The **Market Research Handbook** (Cat. no. 63-224) is 894 (plus 7 % GST) in Canada, US\$113 in the United States and US\$132 in other countries.

To order, write to Statistics Canada. Marketing Division, Publication Sales. Ottawa. Ontario, K1A 0T6 or contact the nearest Statistics Canada Reference Centre listed in this publication

If more convenient, fax your order to (613) 951-1584. Or call toll-free 1-800-267-6677 and use your VISA or MasterCard

LE RECUEIL STATISTIQUE DES ÉTUDES DE MARCHÉ 1993/1994

RECENSEMENT DE 1991

Pour partir du bon pied!

Des séances de remue-méninges jaillissent d'excellentes idées de commercialisation. Mais lesquelles choisir ? Le **Recueil**

statistique des études de marché peut

vous faciliter les choix avant que vous n'engagiez plus de temps et de ressources à l'élaboration de votre stratégie.

Ce recueil statistique est le plus exhaustif qui soit sur les consommateurs canadiens et les entreprises

qui les servent. Il vous aide à définir et situer vos marchés cibles.

Vous cherchez...

- ...des profils socio-économiques et démographiques de 45 régions urbaines ?
- ...des données sur les recettes et les dépenses de détaillants et de petites entreprises ?

Le Recueil contient tout cela... et plus encore :

- données sur le recensement de 1991
- dépenses personnelles en biens et en services
- taille et composition des ménages et des familles
- traitements, salaires et emploi
- investissements par secteur d'activité économique
- population active par secteur d'activité
- prix de l'industrie et de la consommation

Si c'est l'un de nos succès depuis 1977, c'est parce qu'il vous renseigne en long et en large sur le marché. Pour économiser temps et argent, vous ne sauriez vous en passer.

Le **Recueil statistique des études de marché** (n° 63-224 au catalogue) coûte 94 8 (plus 7% de TPS) au Canada, 113 8 US aux États-Unis et 132 8 US dans les autres pays

Pour commander, veuillez écrire à Statistique Canada, Division du marketing. Vente des publications. Ottawa (Ontario). K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus proche (voir-la liste figurant dans la présente publication)

Vous pouvez également commander par télécopieur au (613) 951-1584 ou composer sans frais le 1-800-267-6677 et utiliser votre carte VISA ou MasterCard

THE 1994 CANADA
YEAR BOOK

Your indispensable and comprehensive reference source on Canada

For essential information on Canada, turn to the *Canada Year Book*. An invaluable resource, the 1994 edition is beautifully designed in an inviting and easy-to-read format.

The 1994 Canada Year Book examines recent events, changes and trends in great detail. Organized carefully into 22 chapters, it answers questions on virtually every topic from geography through health to banking.

This edition features:

- Over 700 crisply written pages packed with eye-opening information on life in Canada from social, economic, cultural and demographic perspectives
- 250 concise tables plus 63 charts and graphs that put statistical information into focus
- Stunning photographs capturing distinctively Canadian scenes by some of this country's finest photographers
- Fascinating short feature articles covering everything from archaeology to white collar trends

Trusted for over 125 years by students, teachers, researchers, librarians and business people, the *Canada Year Book* is <u>the</u> reference source to consult <u>first</u> on all aspects of Canada.

An enduring addition to any home or office library!
